Peftrust®

Scalable LCAs for Fashion & Retail

The Retail Supply Chain Sustainability Conference
(RSSC) 18th March, 2025, London

Peftrust® helps fashion and lifestyle brands, retailers, and manufacturers with **automated, data-driven LCA insights**—integrating impact analysis into design and decision-making.

Because better choices start with better data.

Agenda

- ✓ Why LCAs matter for brands & retailers
- ✓ The challenges of data precision
- ✓ Unlock eco-design for compliance
- ✓ How Peftrust & Segura work together to streamline LCA integration

Why LCAs Matter for Brands & Retailers

Regulatory Pressure is Rising

- ❌ Supply chain data is fragmented—brands struggle to get verified insights.
- ❌ Manual LCAs are slow & costly—they don't scale.
- ❌ Inconsistent vendor data—retailers lack standardization.

Solution: Automate LCAs with Peftrust + Segura.

Data Precision Quiz

How Well Do You Know LCA
Data?

What is data point is
weighted the highest
in an impact score?

PRODUCT WEIGHT

**11% of your product's ENTIRE
impact**

Which has the **lowest impact** out of the three choices?

Thread count

Air transport

Packaging

What has the lowest impact out of the three choices?

Thread count 2.69%

Air transport 0.5%

Packaging 1.06%

**What material has the
highest and worst
environmental impact?**

TRICK QUESTION

Why? It depends on the data.

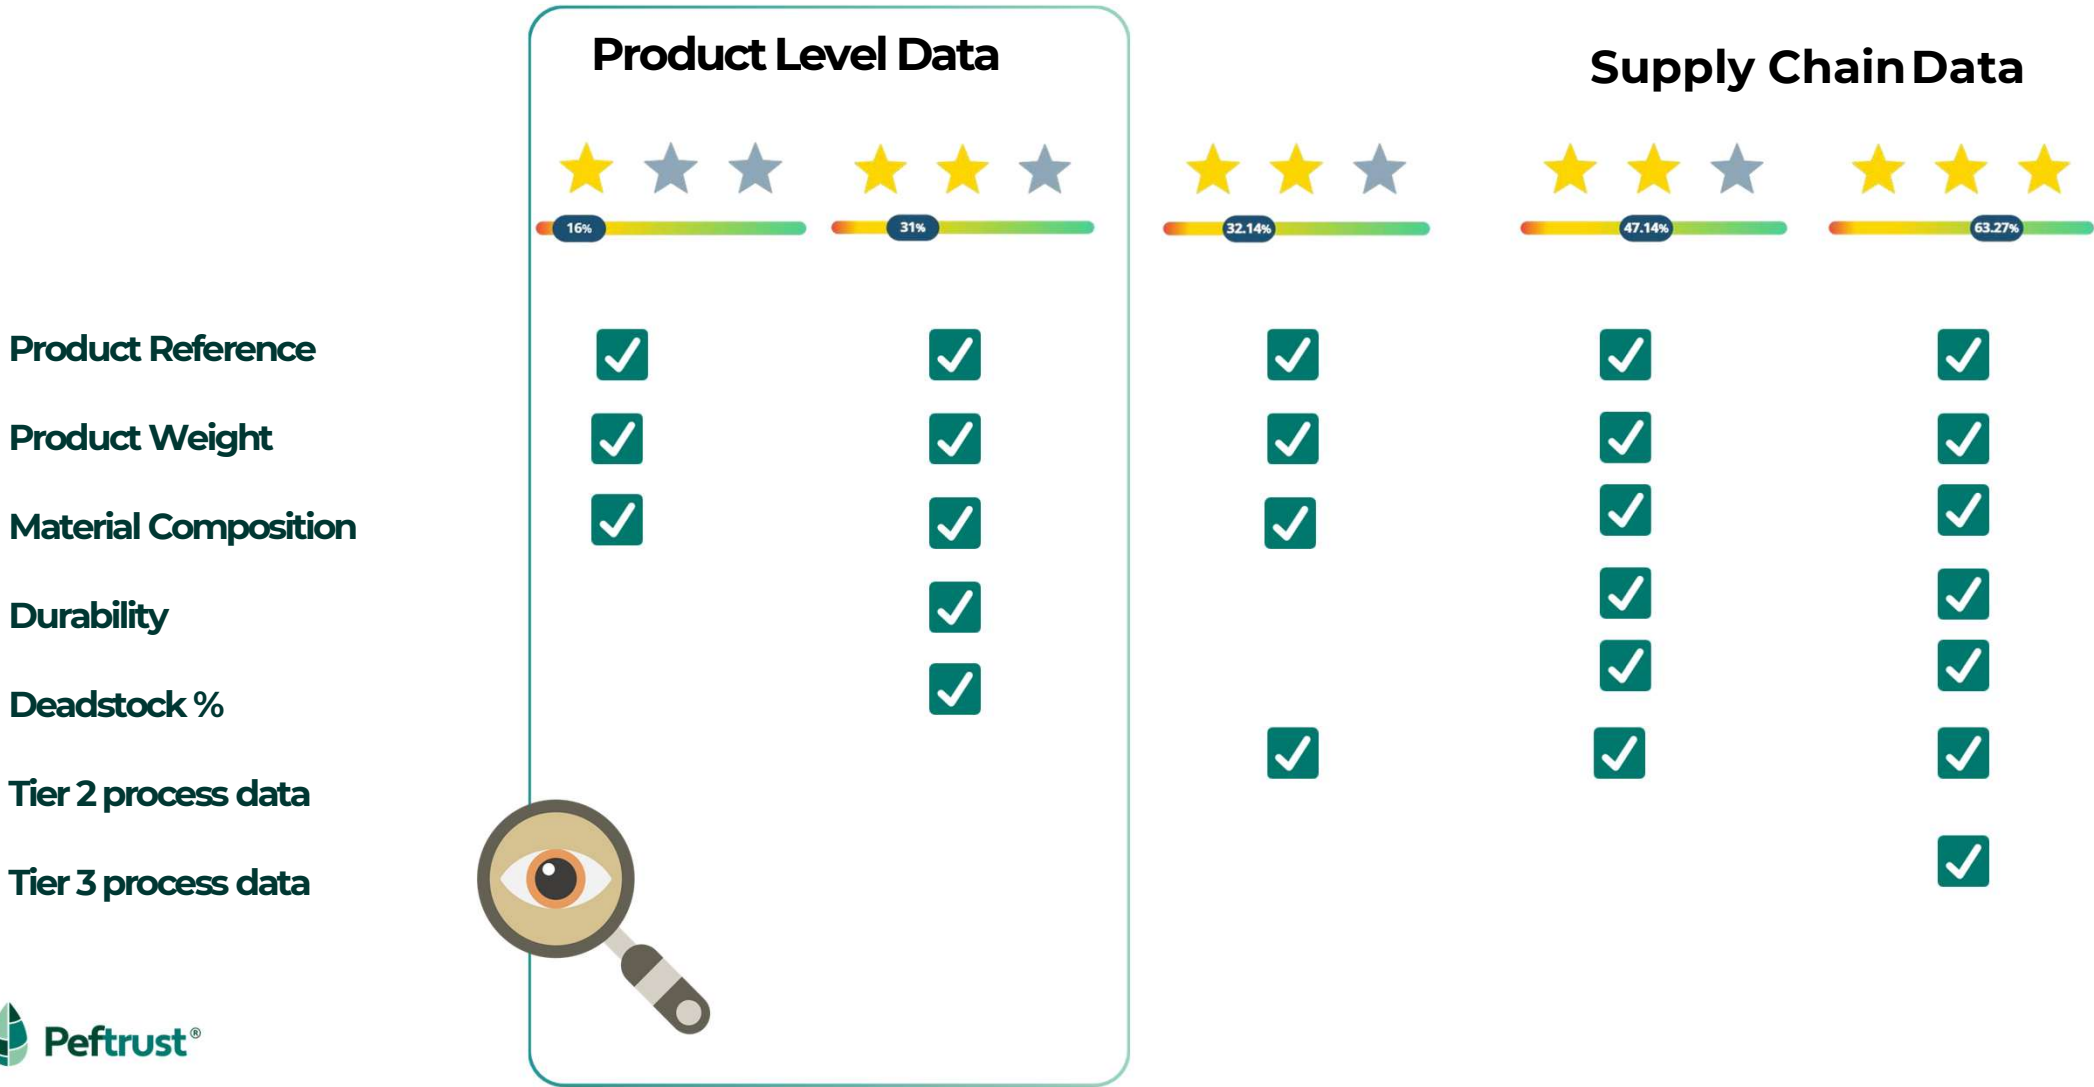

Without capturing precise information—like deadstock, durability, the energy mix used in production, or whether the material is recycled vs. virgin—**you can't accurately compare one material to another.**

Data Precision: Turning Overload into Accuracy

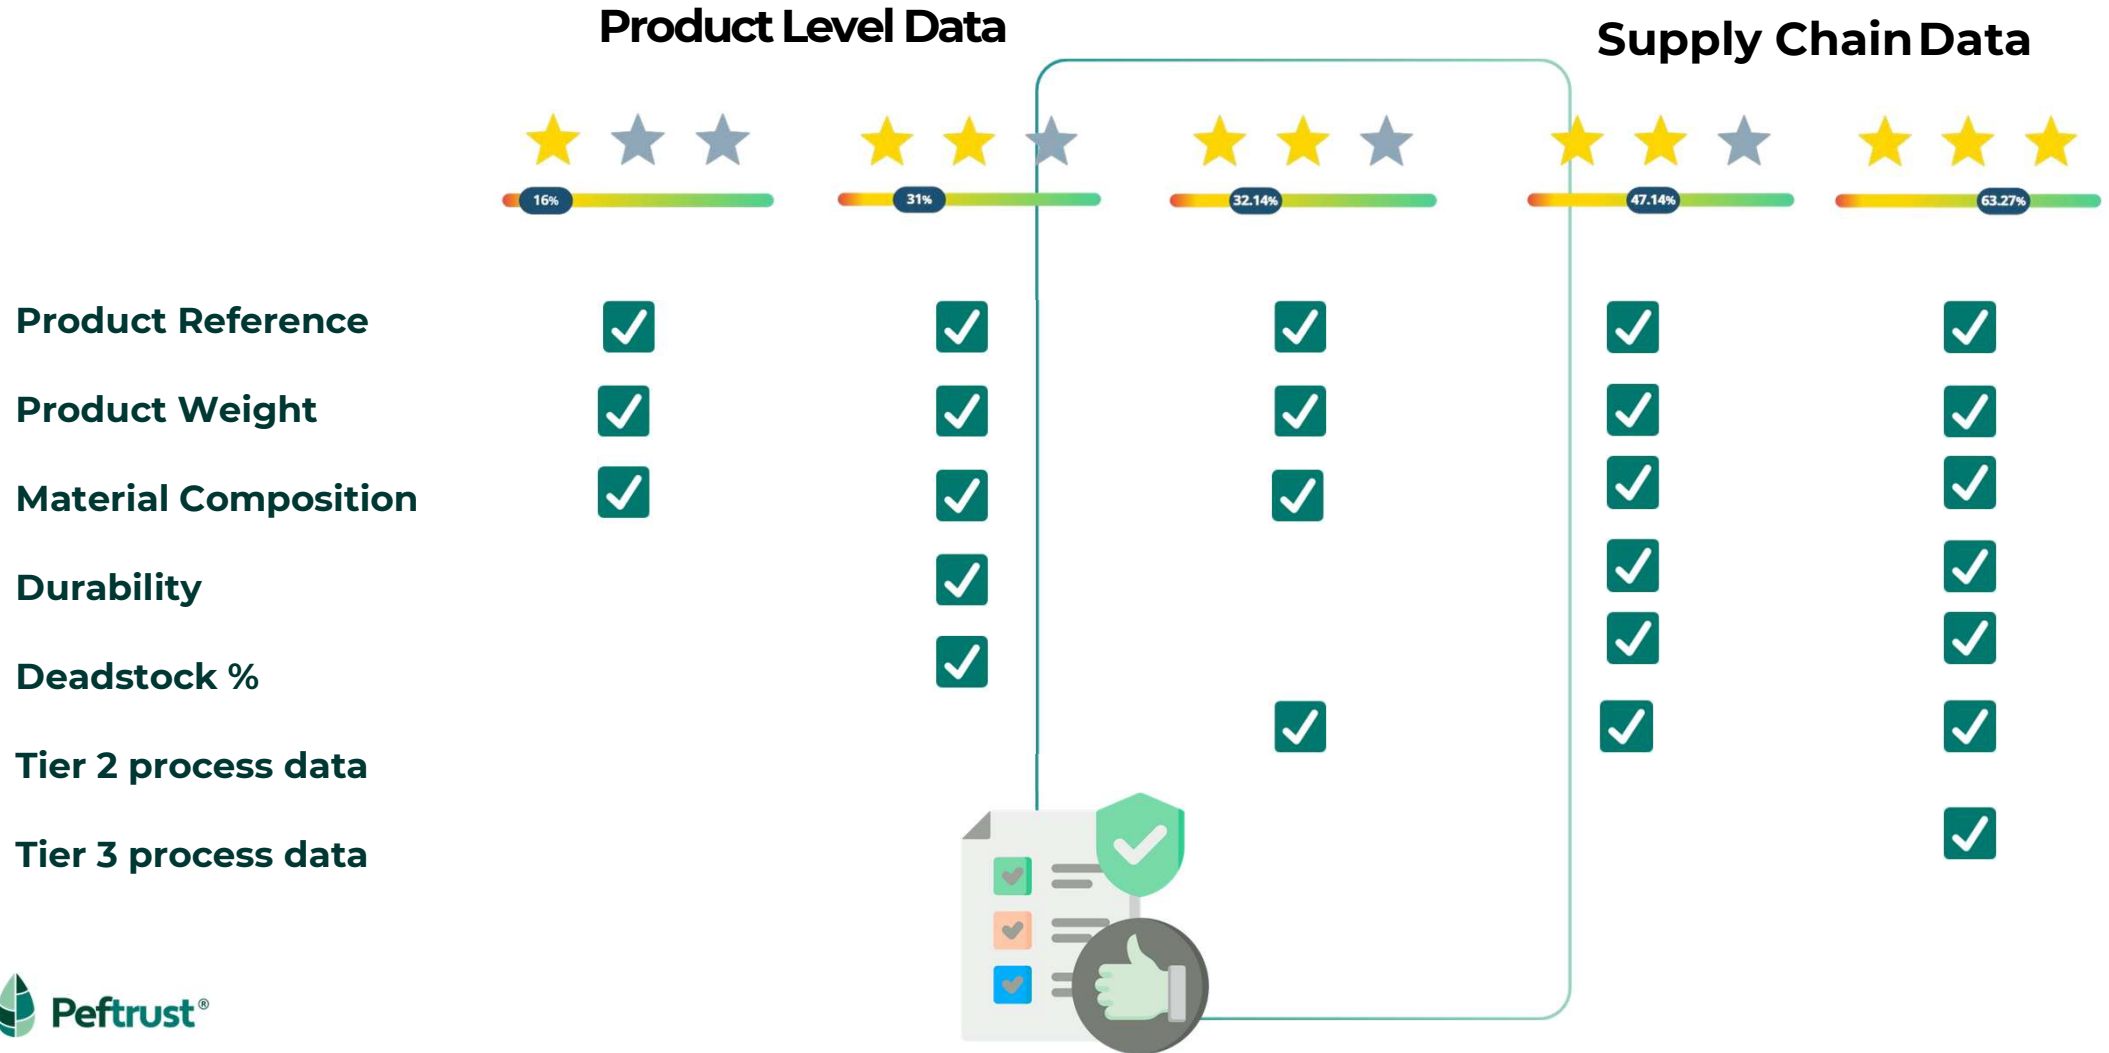

Not all data is created equally.

Data Precision for Initial Assessments

Data Precision for Compliance

Data Precision for Eco-design

Product Level Data

Product Reference

Product Weight

Material Composition

Durability

Deadstock %

Tier 2 process data

Tier 3 process data

Supply Chain Data

Eco-design: The Data Validation Gap

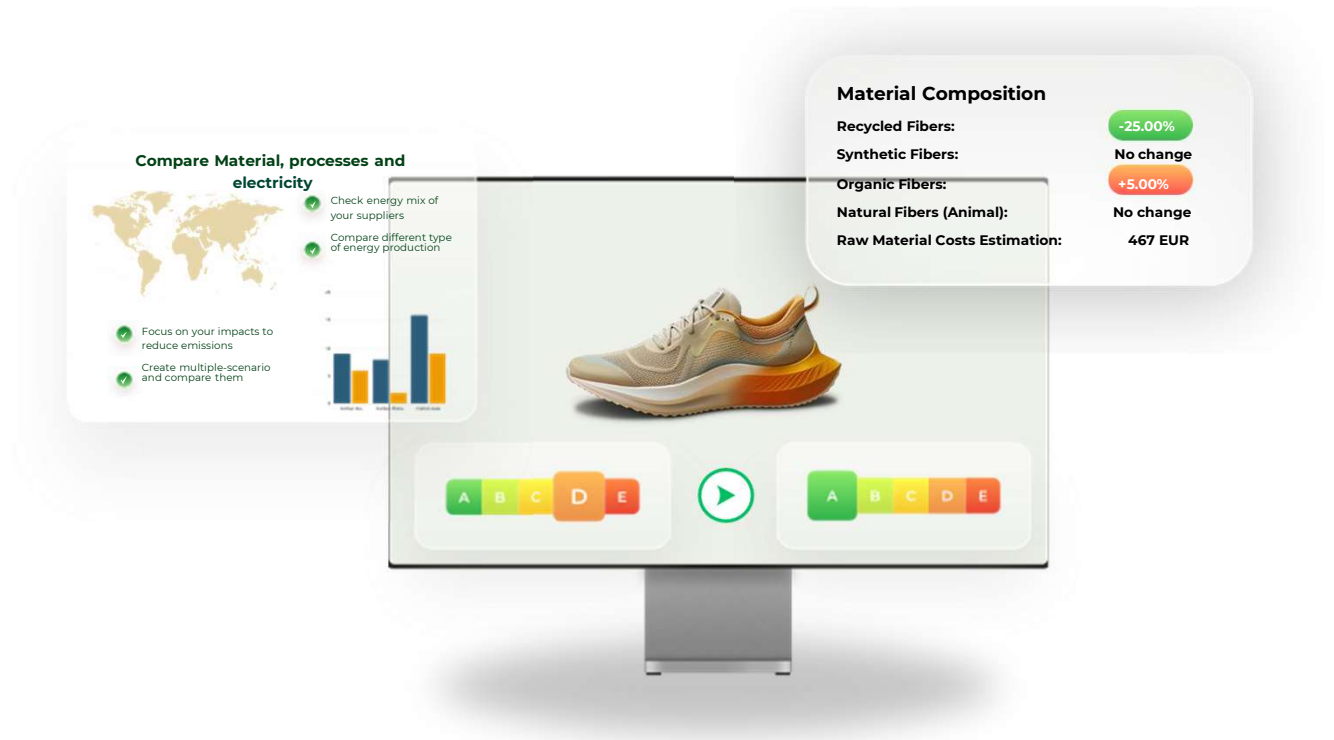

70-85% of a product's environmental impact is driven by its materials and manufacturing.

- ✗ Measuring Impact after production
- ✗ ESPR & Digital Product Passports (DPP) require sustainability integration at the design phase.
- ✗ Sustainability teams & Product teams work in silos.

*The foundation of solid eco-design starts with **collecting, structuring, and making sense of the right data.***

We are redefining Eco-Design by transforming data-driven automation into reality

Early-stage automated LCAs

Material, process, energy-specific impact scoring & simulations

Benchmarking products, categories, collections

LCAs are critical—but they're **only as good as the data behind them.**

Unlocking Granular Data for Precise Product Scoring

Takeaways

- ✓ Automated data collection for precise, supply chain-specific insights.
- ✓ Early-stage sustainability integration to maximize impact before production.
- ✓ Standardized impact assessments ensuring brands & retailers align on sustainability metrics.
