User Community

// Typically meet once a quarter (online)

// Provides a forum to discuss shared challenges

// Discuss platform capabilities and developments

// User community drives the platform developments

// User community Linked In Forum

RELEASED SINCE RSSC 2024

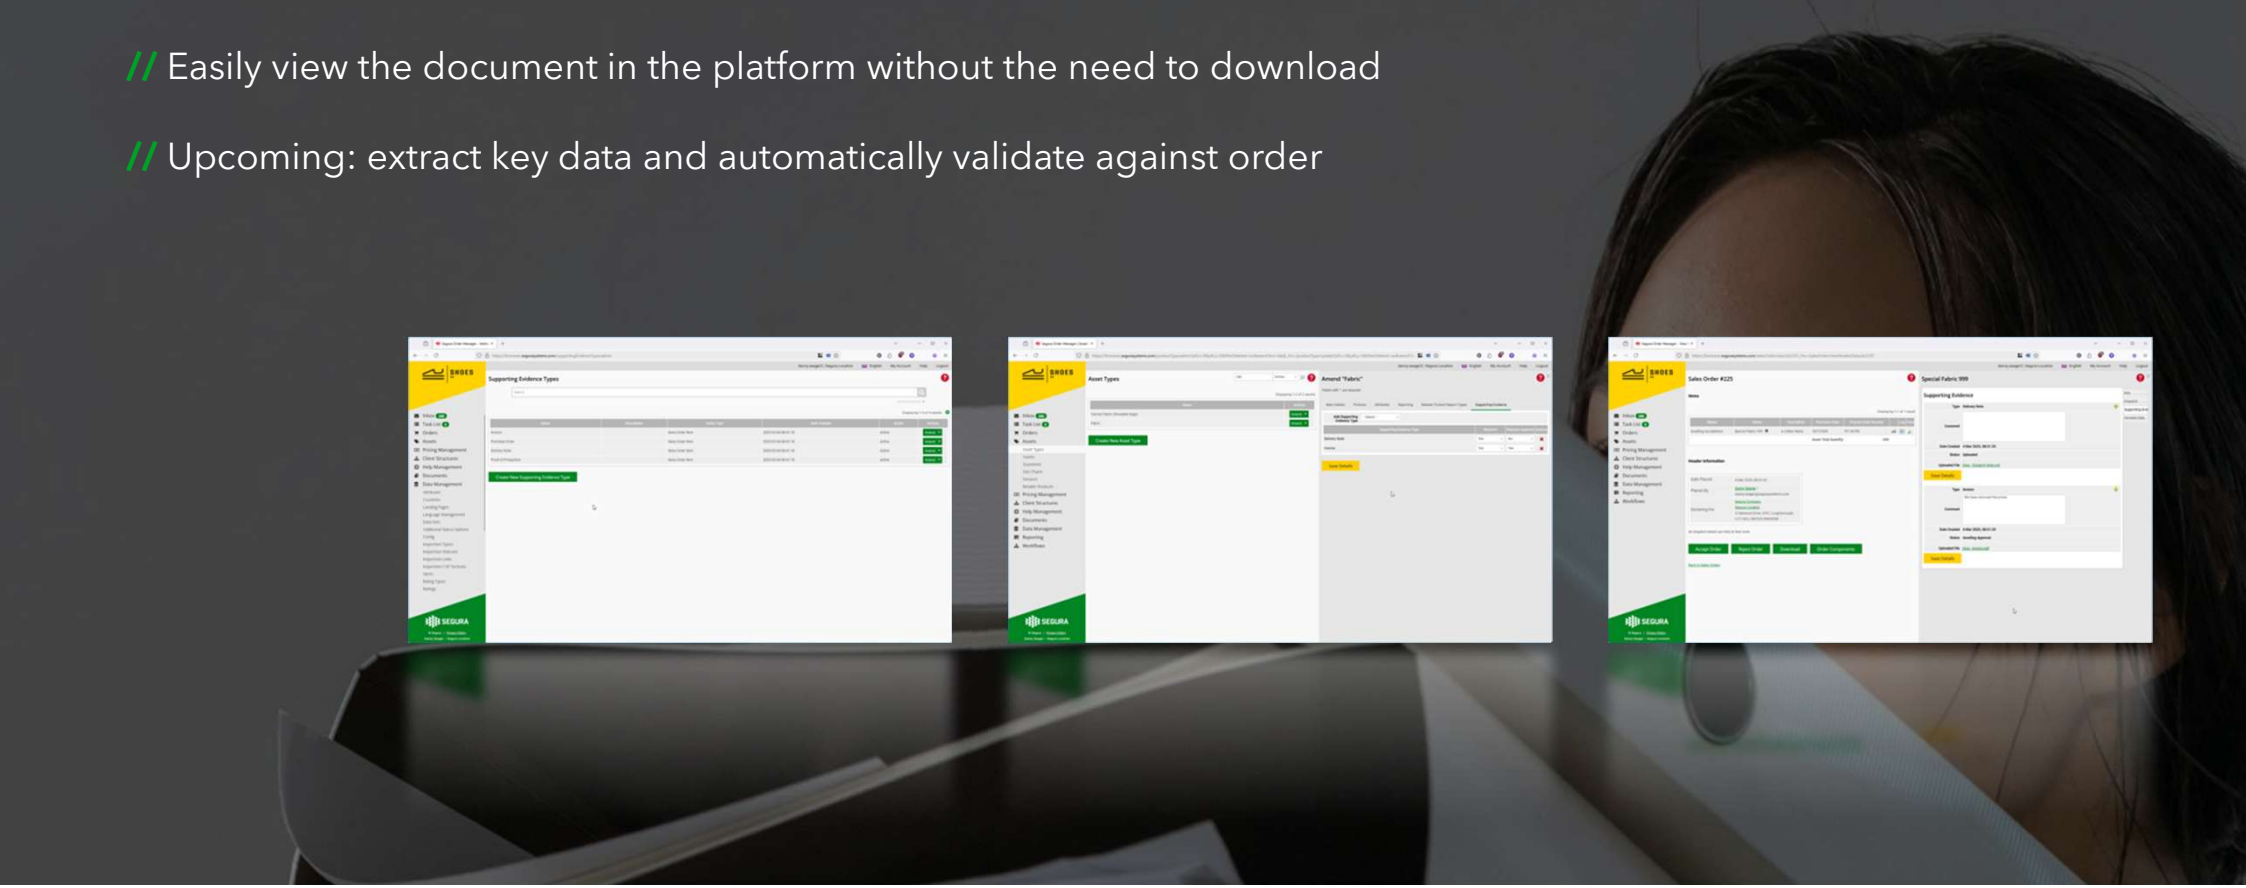
Supporting Evidence

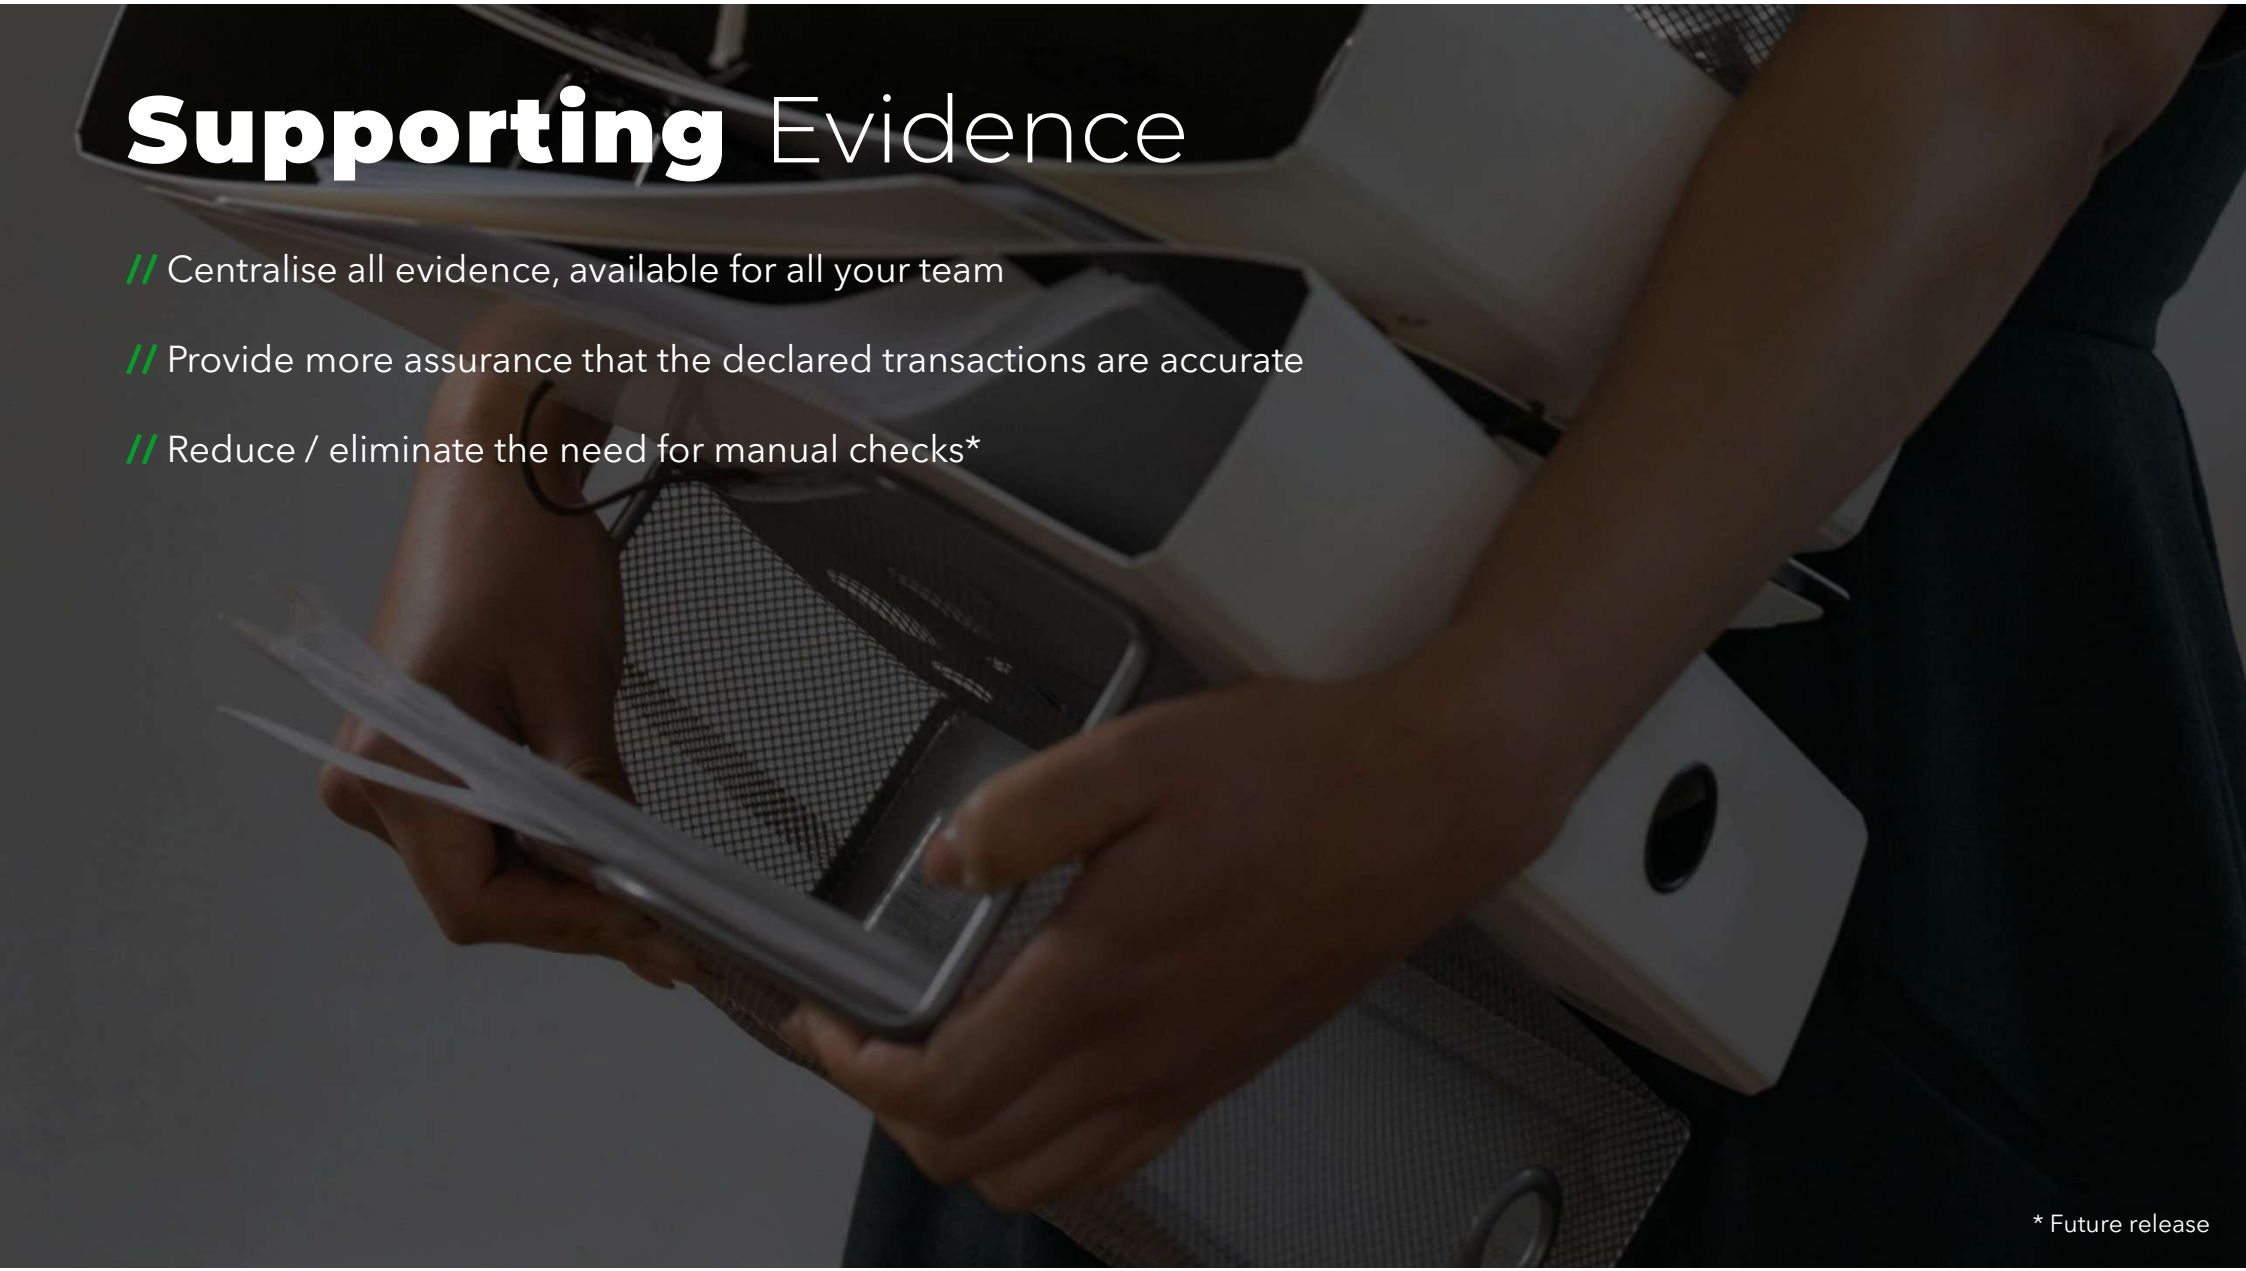
// Request evidence, beyond transactional certificates, from your supply chain of transactions

// Capture documents such as invoices, delivery notes and proof of production

// Easily view the document in the platform without the need to download

// Upcoming: extract key data and automatically validate against order





Supporting Evidence

// Centralise all evidence, available for all your team

// Provide more assurance that the declared transactions are accurate

// Reduce / eliminate the need for manual checks*

* Future release

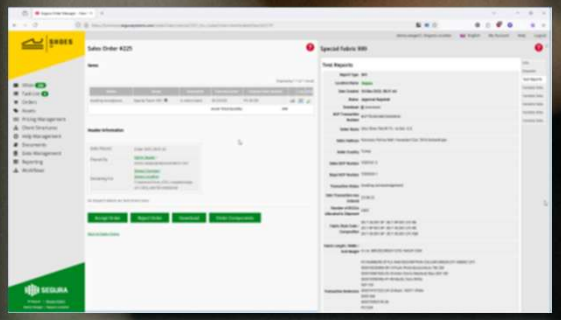
Certificate Extraction

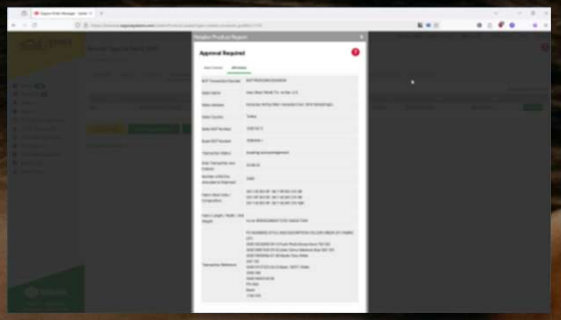
// Extract data from certificates uploaded by supplier

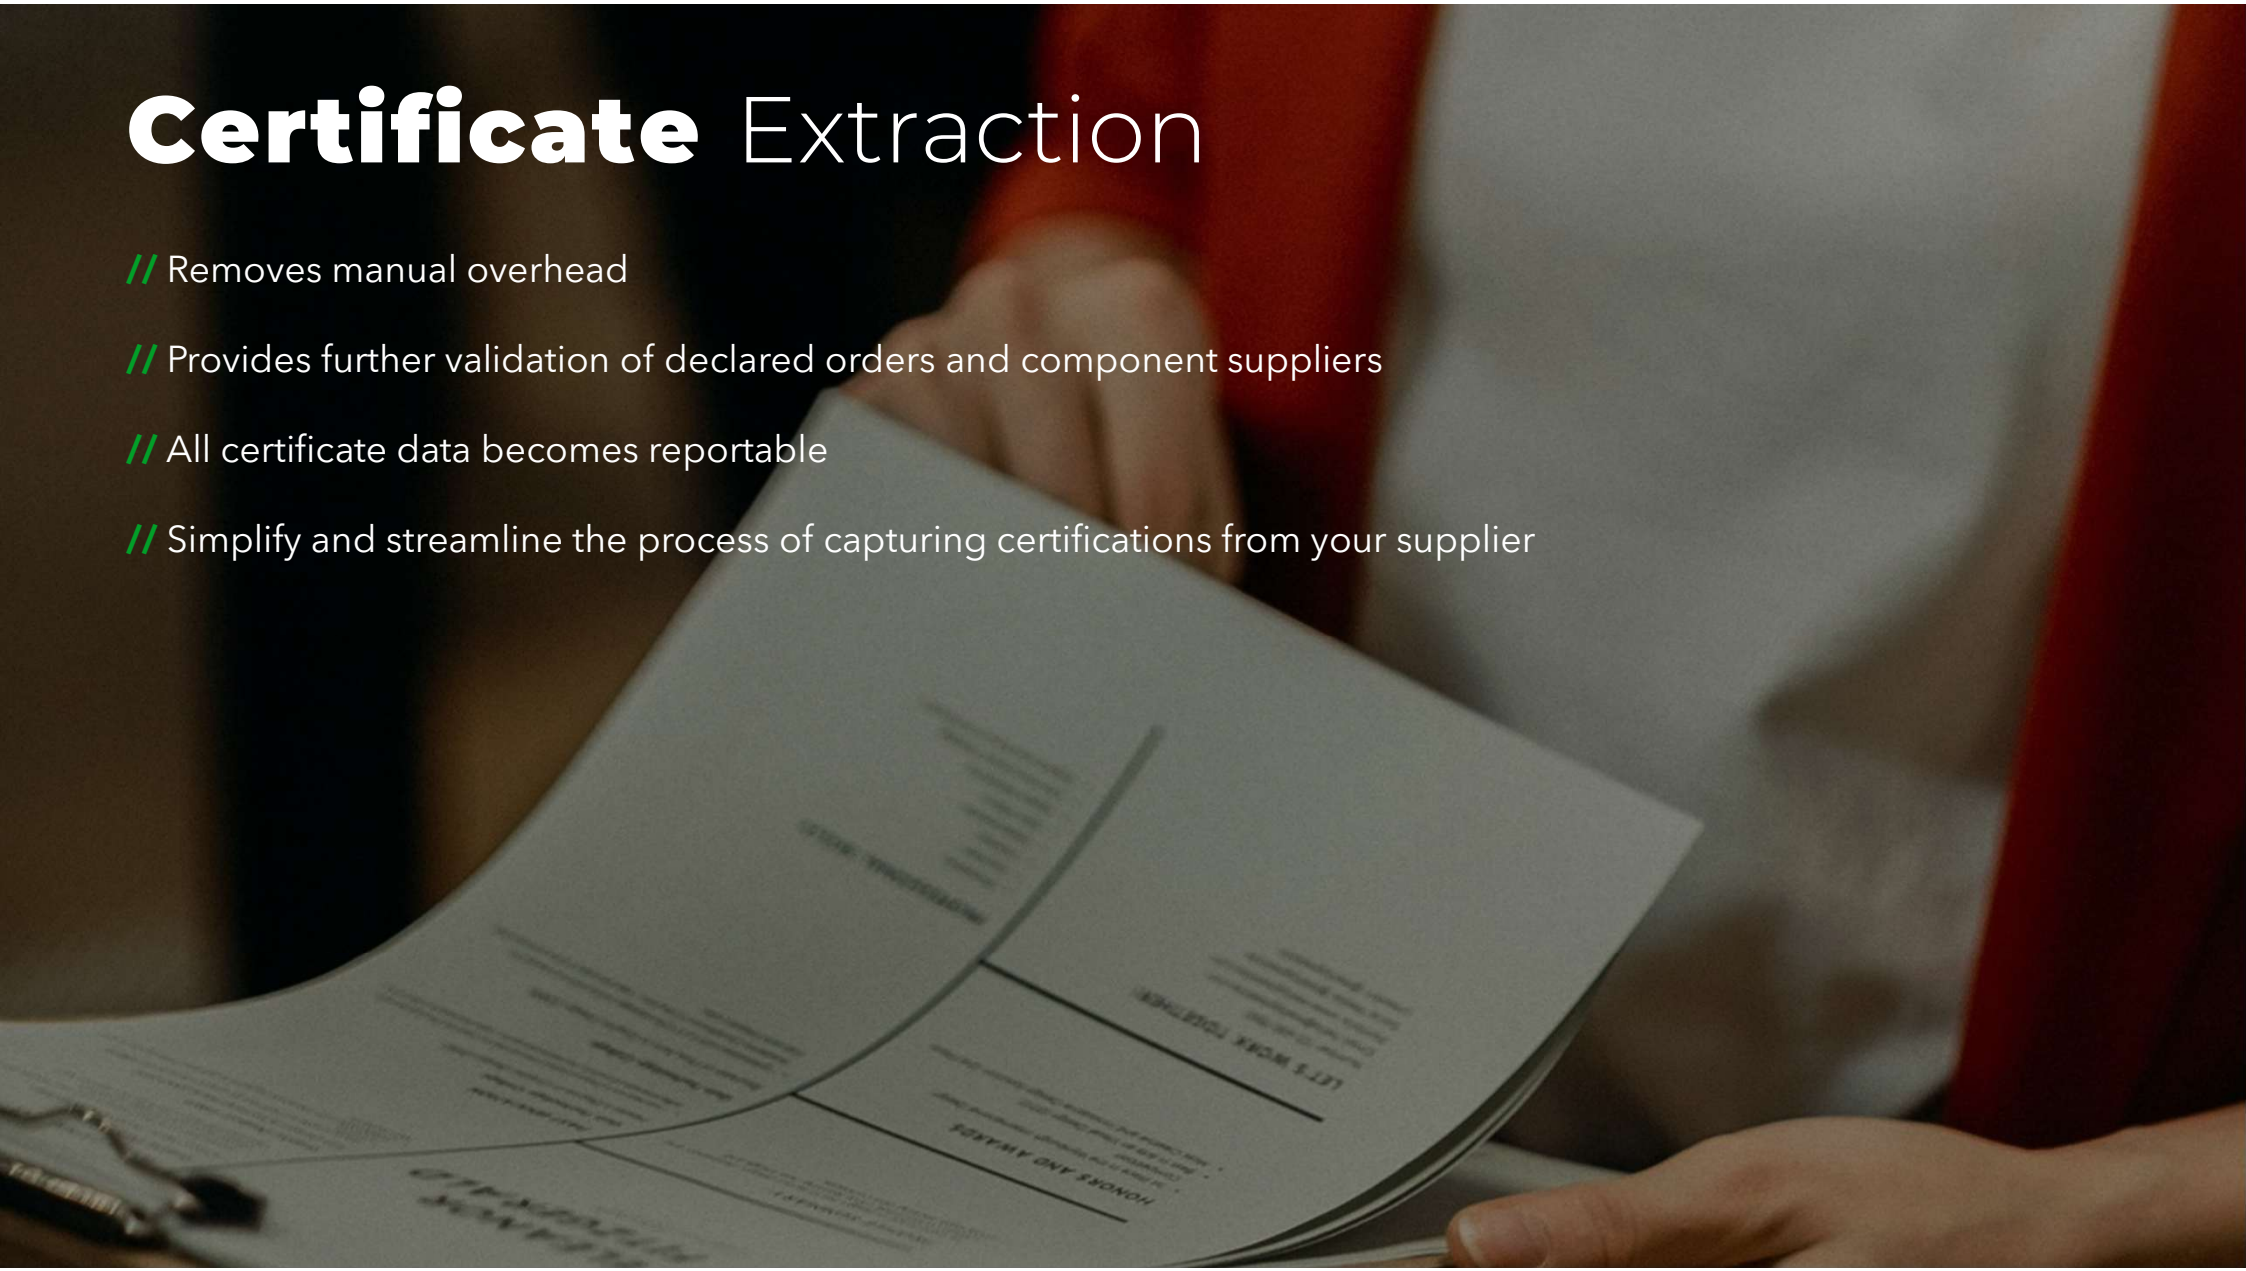
// Support for transactional and scope certificates

// Works for BCI Certificates, Lenzing and GRS

// Upcoming: automatically validate against declared orders







Certificate Extraction

// Removes manual overhead

// Provides further validation of declared orders and component suppliers

// All certificate data becomes reportable

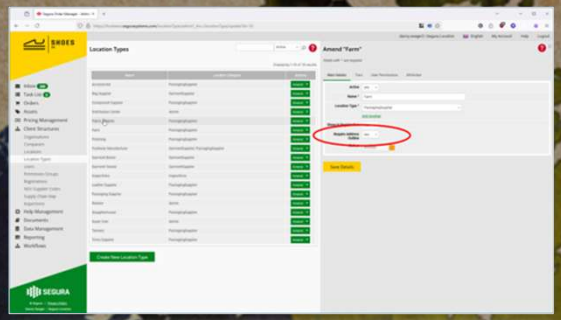
// Simplify and streamline the process of capturing certifications from your supplier

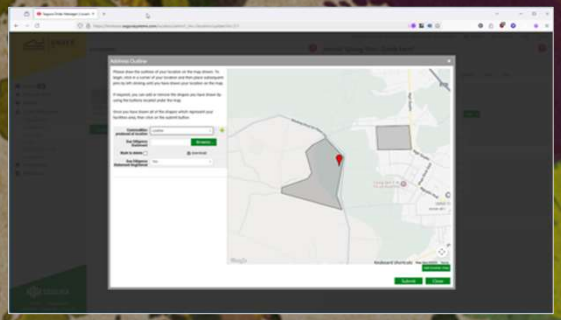
Location Outlines

// Capture the borders of the facilities within your supply chain

// Limit this to specific location types, such as farm and forest

// Prompt the user whenever they change their address

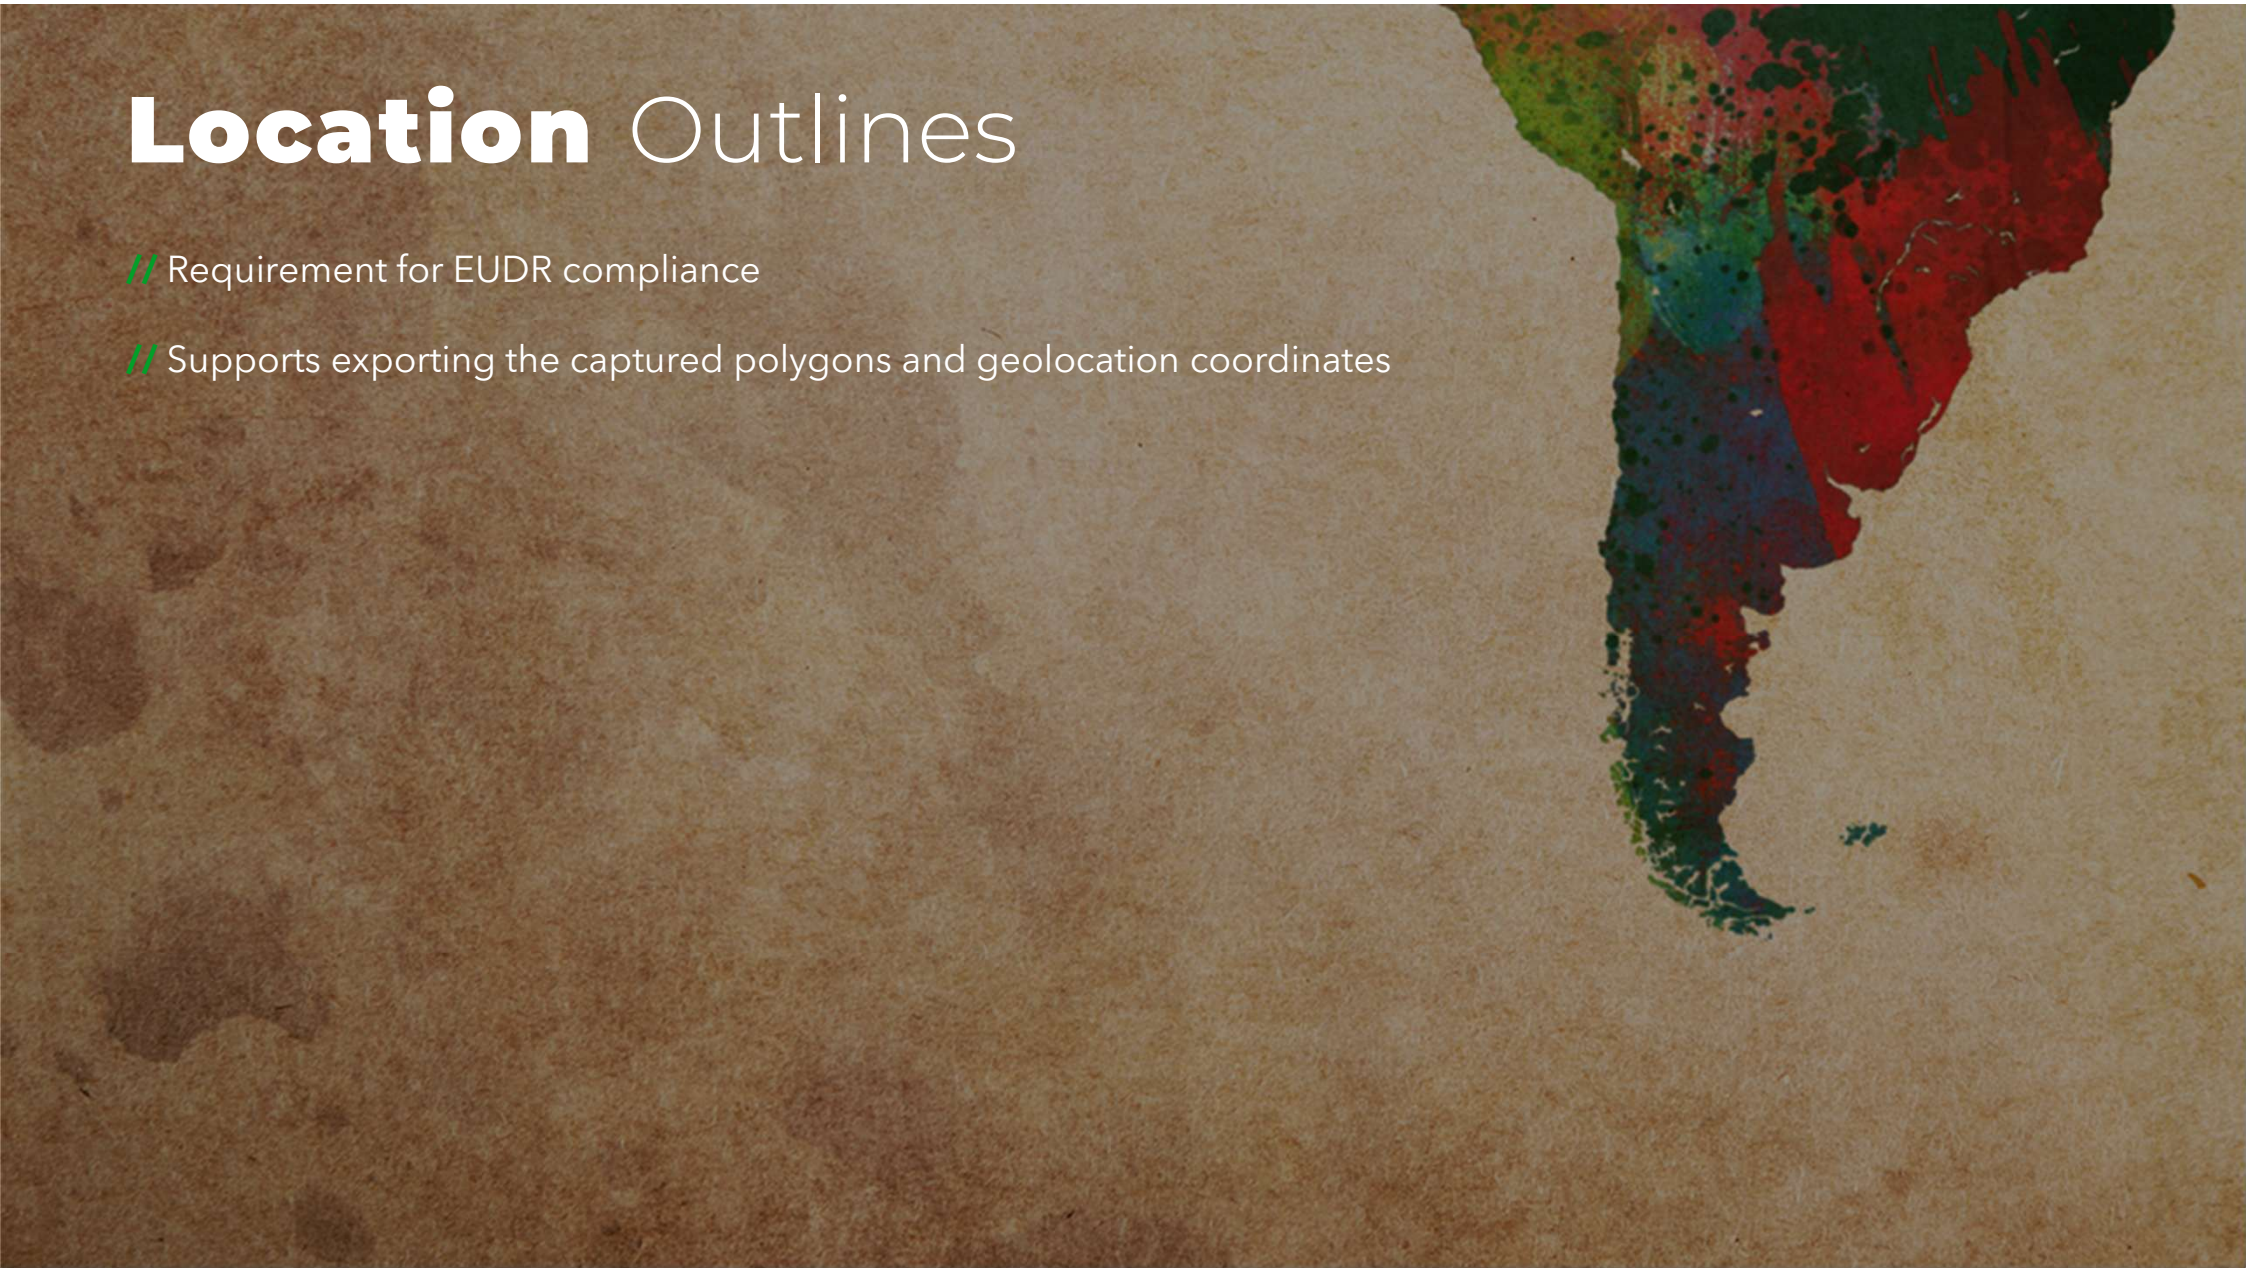




Location Outlines

// Requirement for EUDR compliance

// Supports exporting the captured polygons and geolocation coordinates

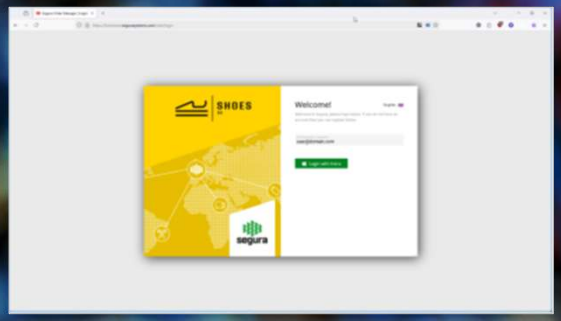


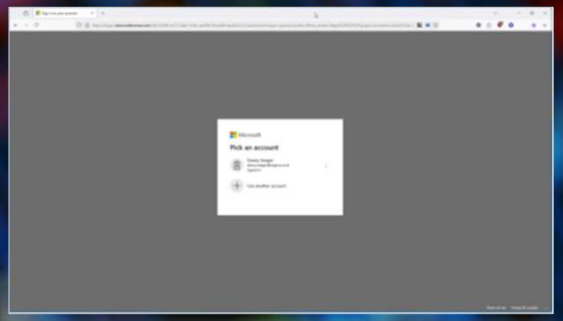
Single Sign-on

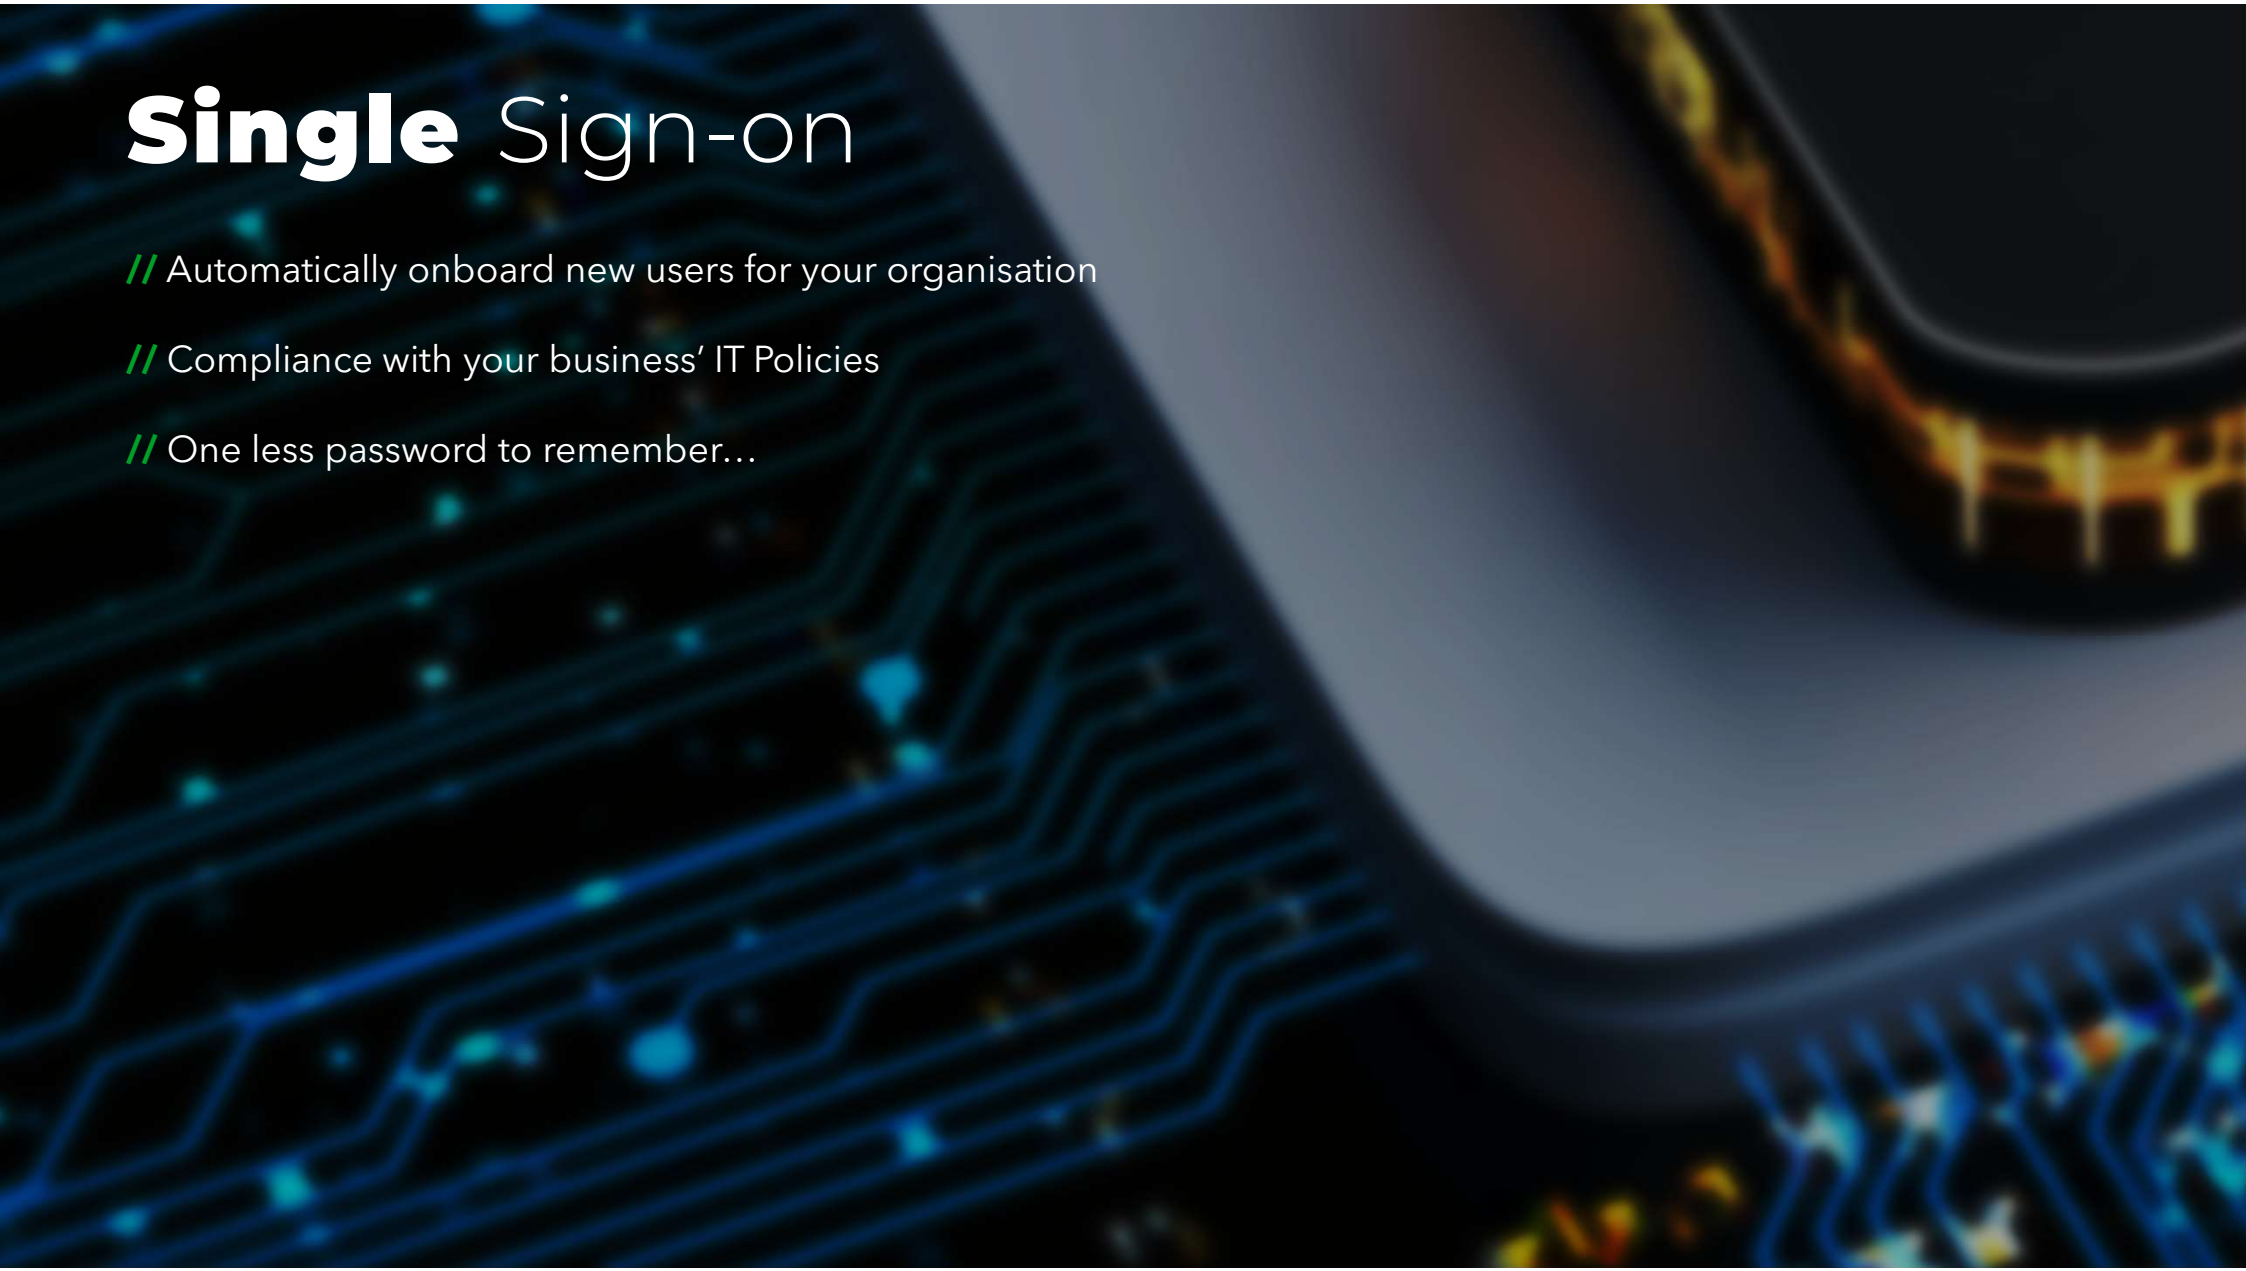
// Authenticate your users against your Microsoft Entra Account

// Easier user management

// Centralise user administration





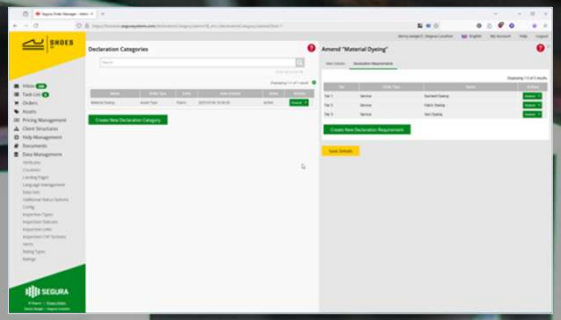


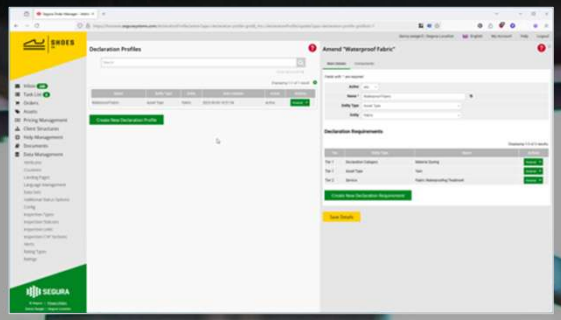
Single Sign-on
// Automatically onboard new users for your organisation
// Compliance with your business' IT Policies
// One less password to remember…

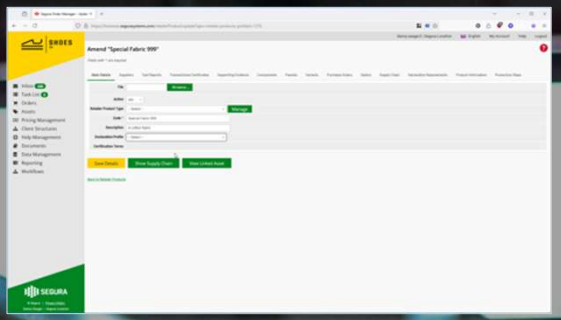
Declaration Profiles / Categories

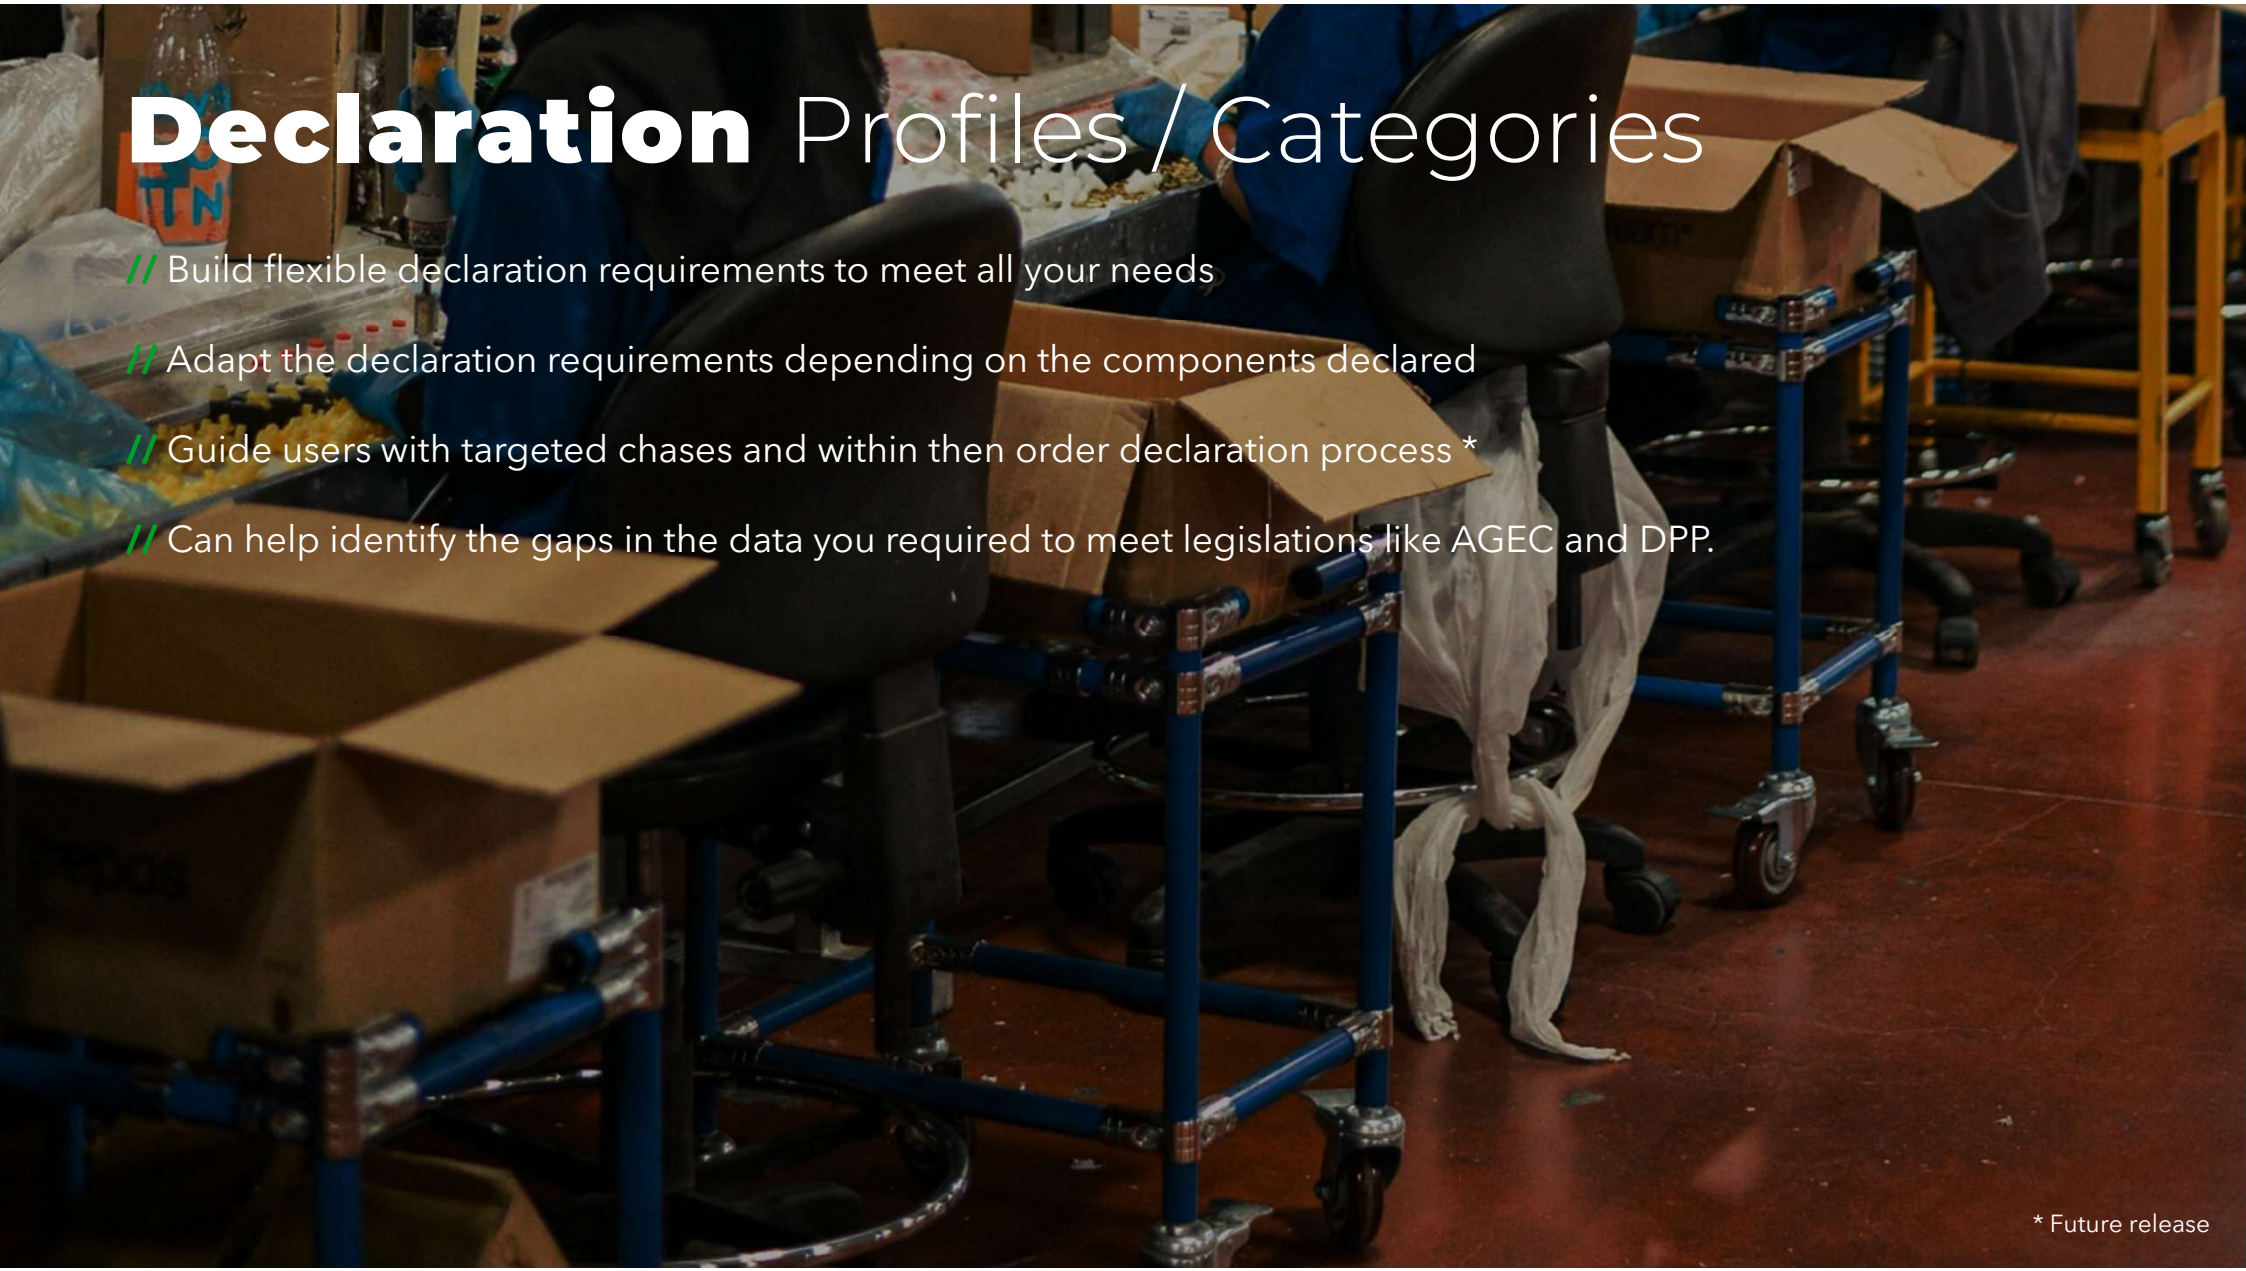
// Define “categories” which can contain multiple services or asset types

// Setup “profiles”, assigned to components which override declaration requirements









Declaration Profiles / Categories

// Build flexible declaration requirements to meet all your needs

// Adapt the declaration requirements depending on the components declared

// Guide users with targeted chases and within then order declaration process *

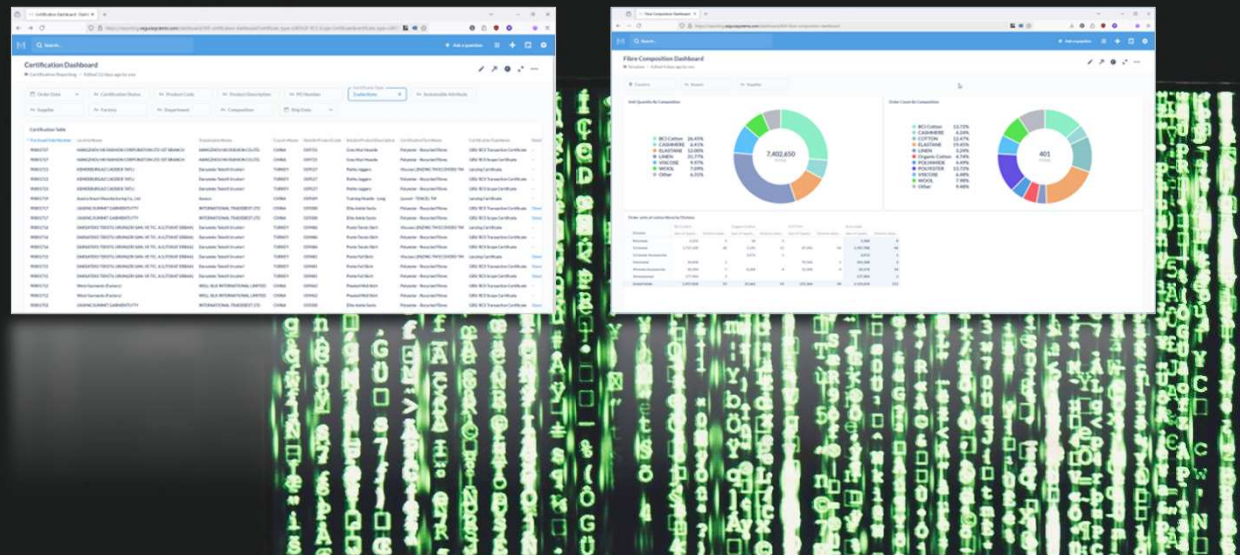
// Can help identify the gaps in the data you required to meet legislations like AGEC and DPP.

* Future release

New Dashboards

// Certification dashboard

// Fibre Dashboard



New Dashboards

// Certification dashboard:

View all captured certificates

Identify missing certificates

Easily determine outstanding approvals

// Fibre Dashboard

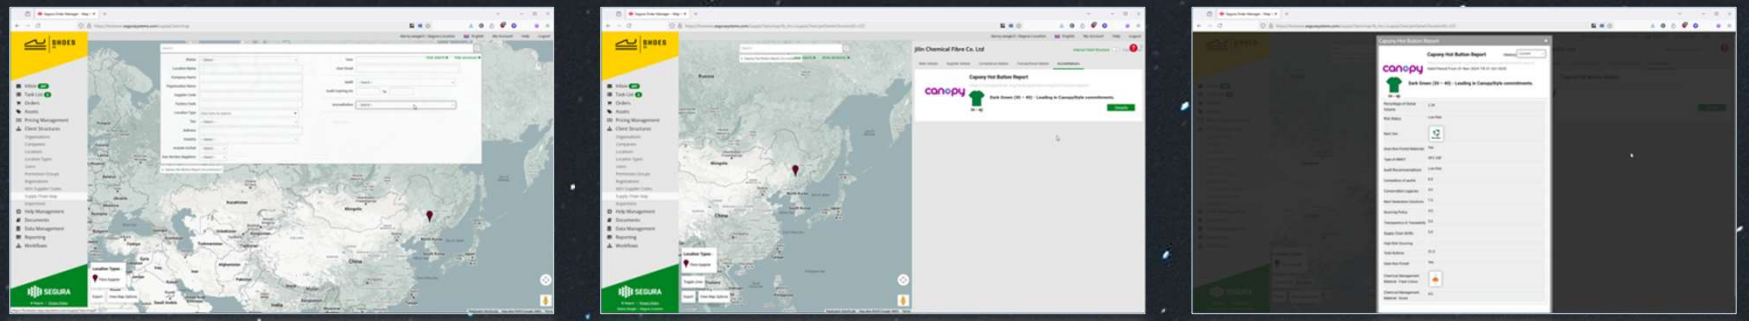
Create a breakdown by Department, Division, Season etc…

Accreditations

// Import and display external data from external “accreditation” sources

// This can be applied to any entity in the system, but the primary use cases are suppliers and products

// All accreditation data is easily reportable and exportable



Accreditations

// Import and display external data from external “accreditation” sources

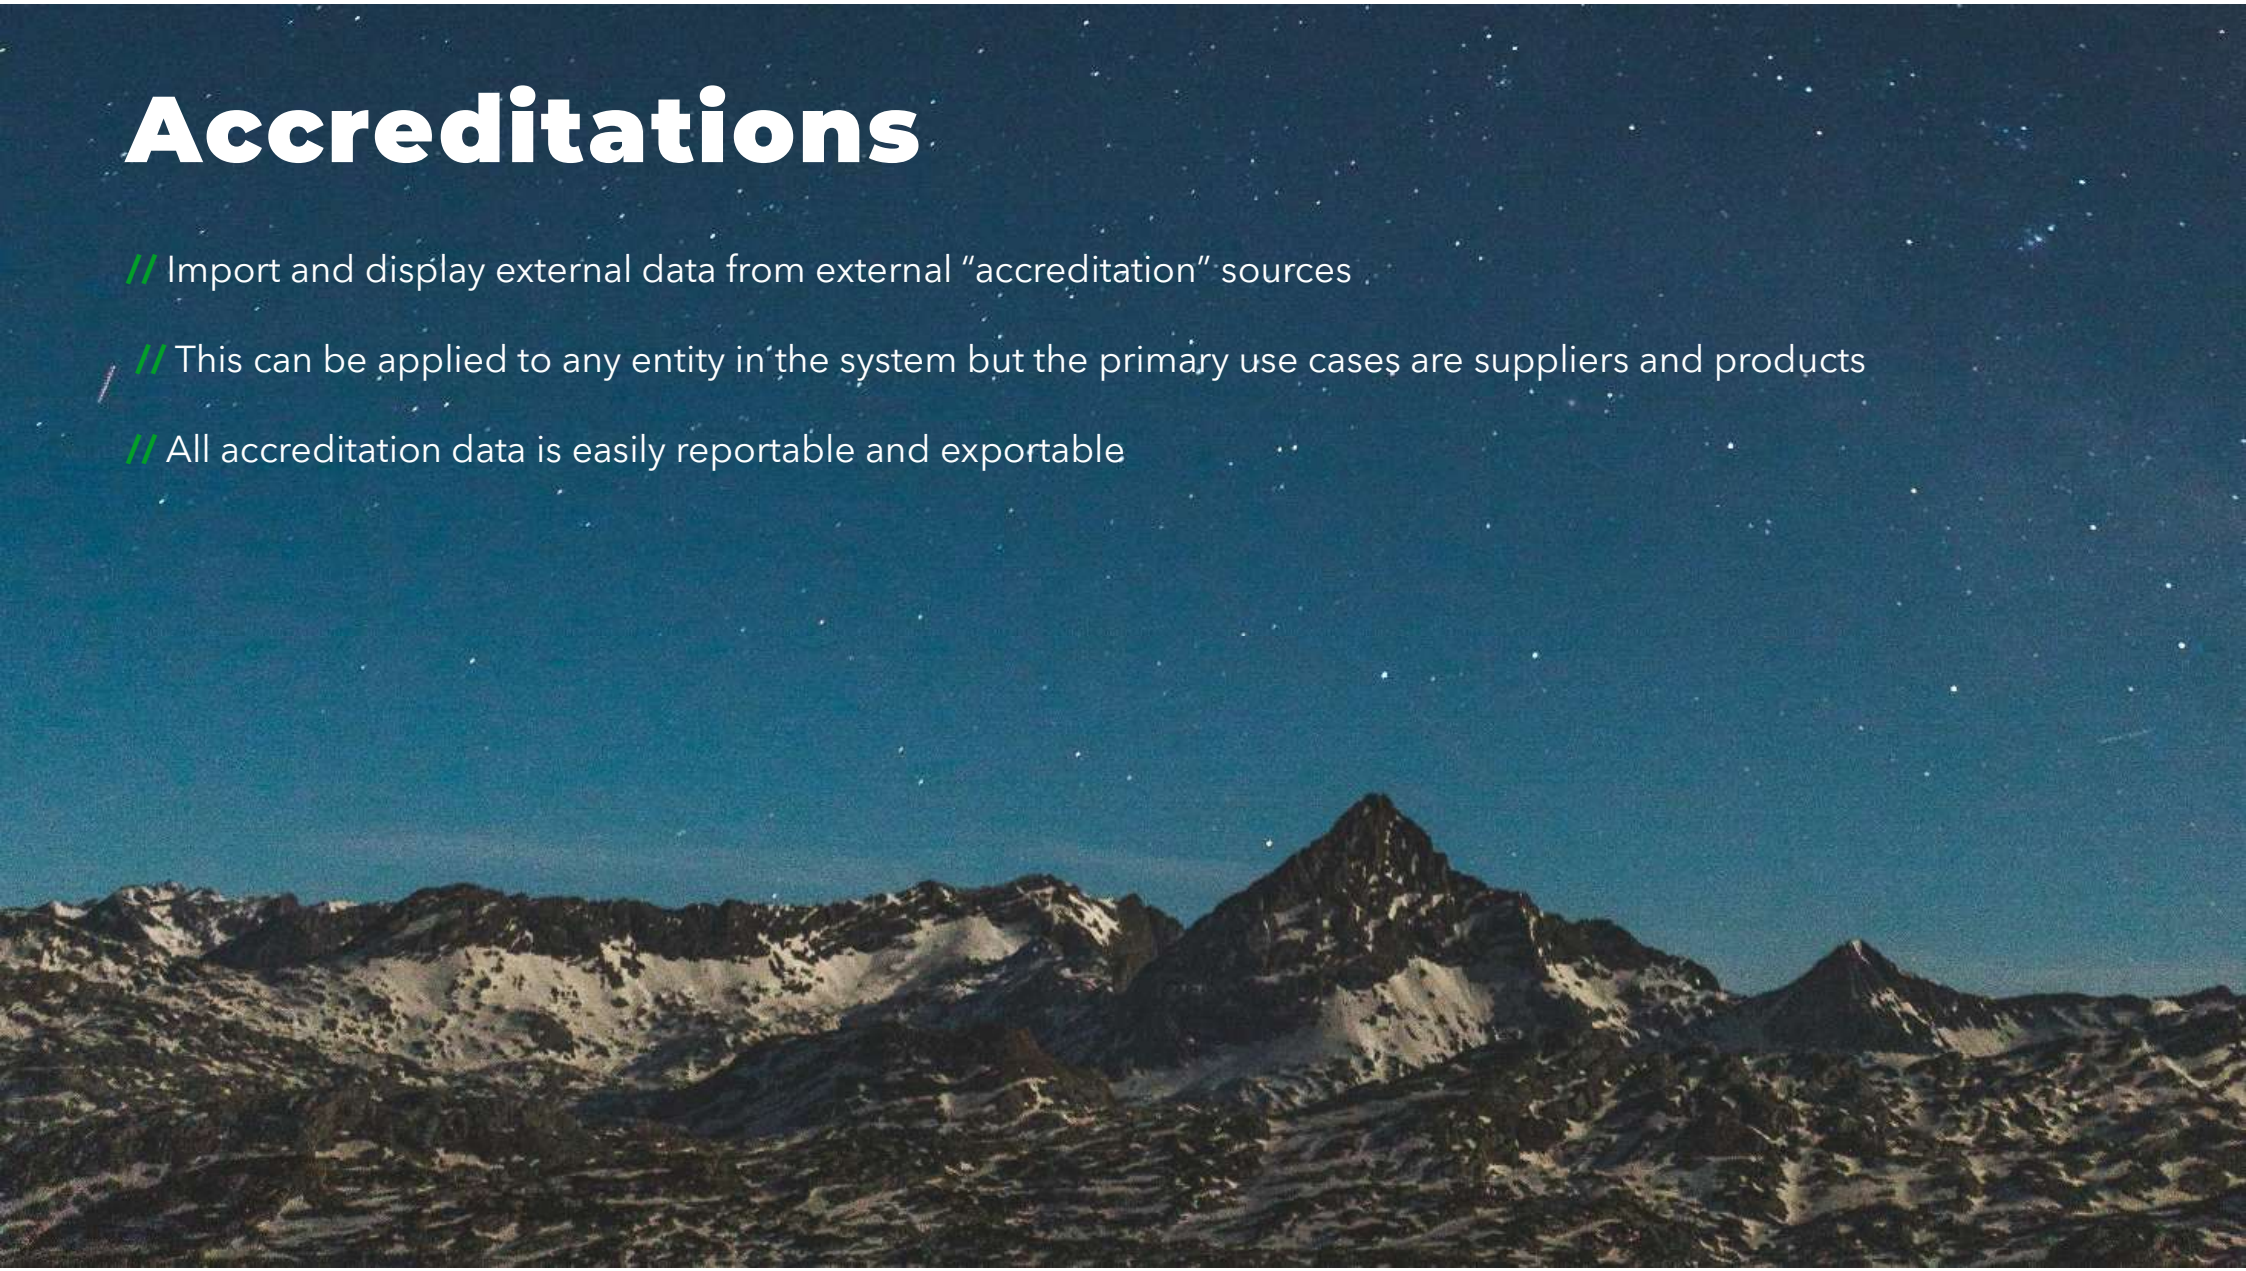
// All accreditation data is easily reportable and exportable



IN PROGRESS

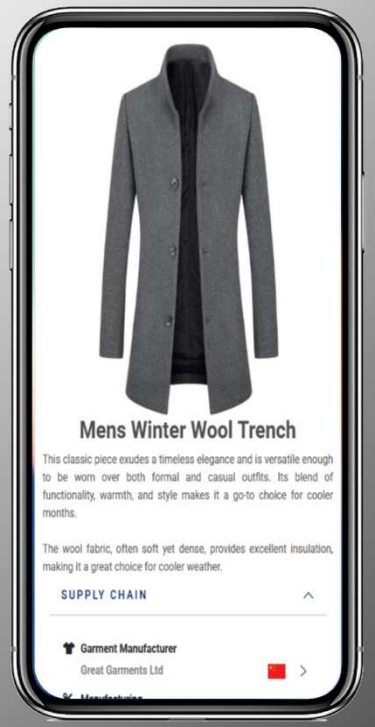
Digital Product Passport V2

// A standalone branded version and an embeddable version

// QR Code generation and redirect service

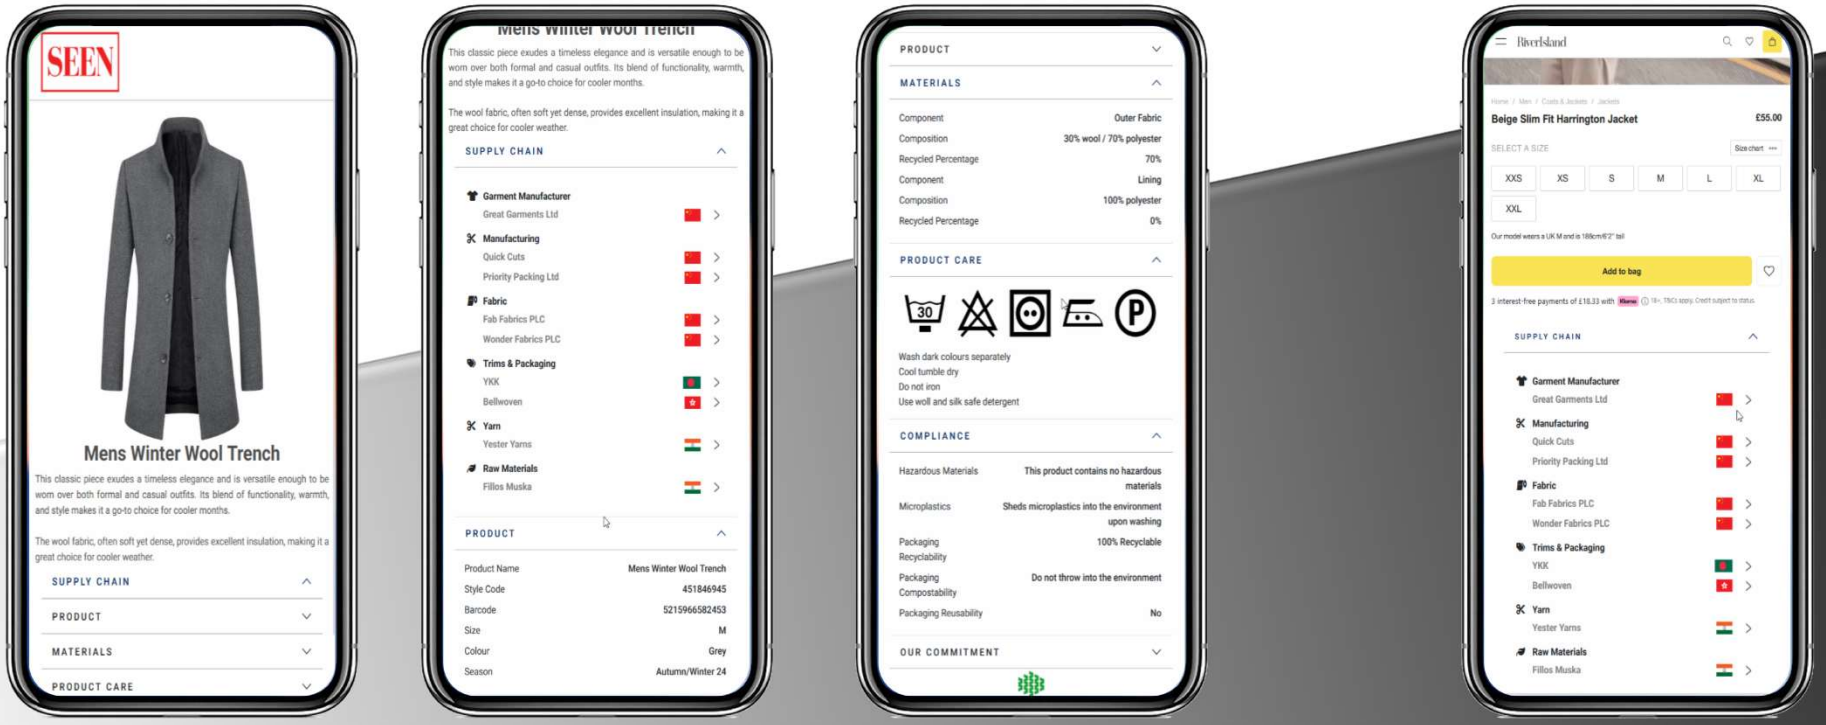
// Branded to match your existing ecommerce site

// Fully responsive, in both senses



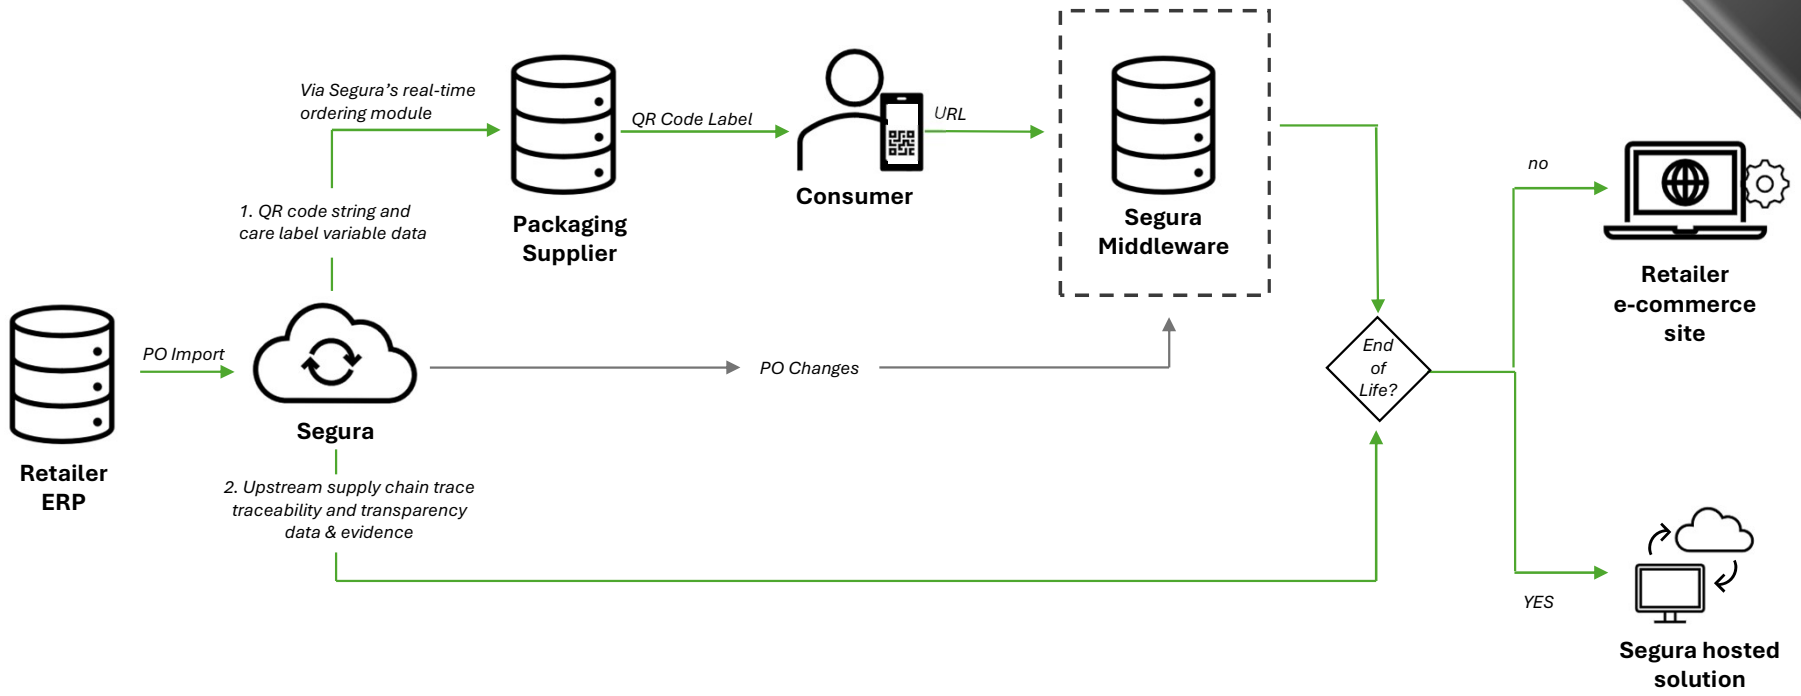
Digital Product Passport V2

// A standalone branded version and an embeddable version



Digital Product Passport V2

// QR Code Generation & Redirect Service



Do you have a solution to how you will make your consumer facing DPP available for years beyond the products end of life?

Digital Product Passport V2

// Fully responsive, in both senses:

// The layout will adapt to fill the space provided on your ecommerce platform.

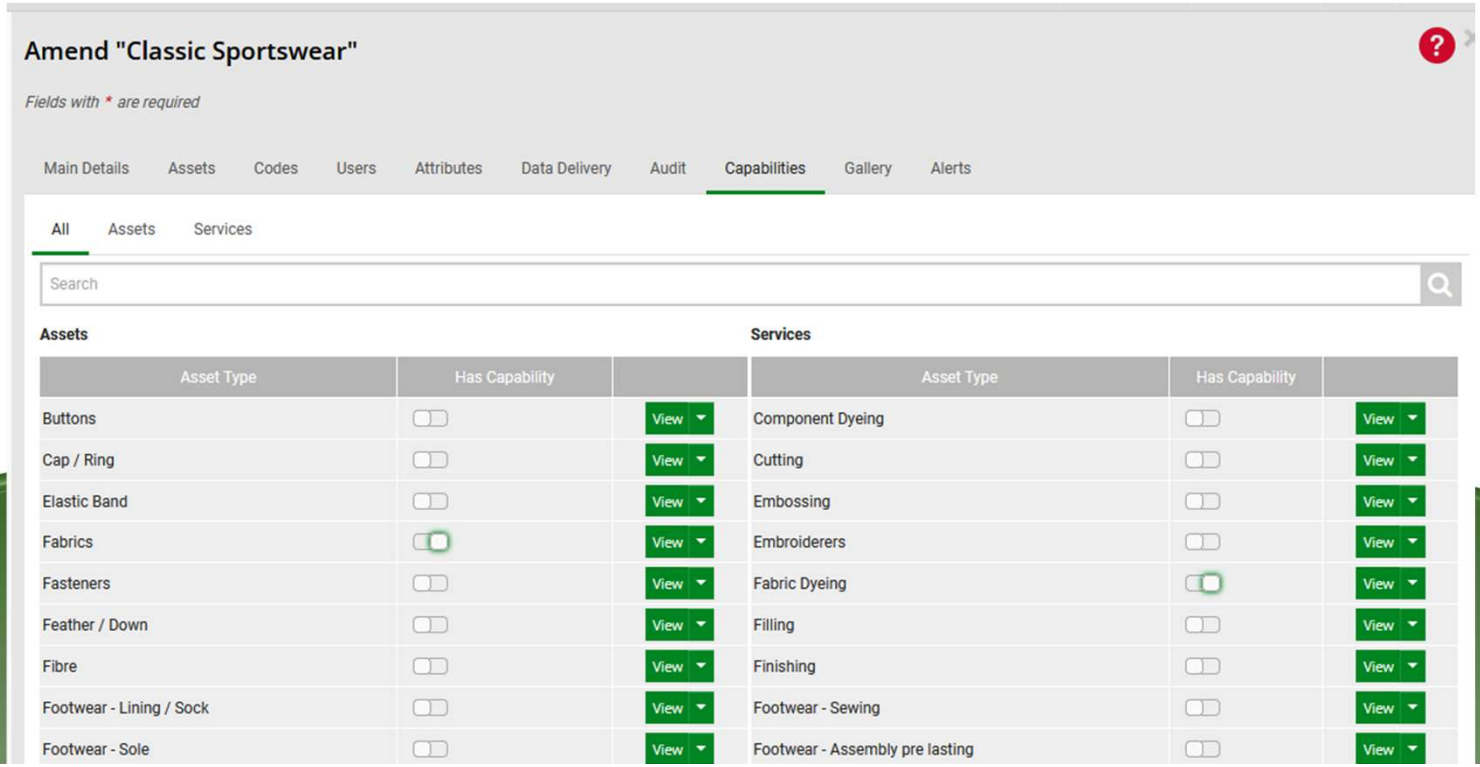
// Optimised loading and caching to ensure that the DPP module has no impact on page loading

Location Capabilities

// Capture capabilities of suppliers

// Compare order declarations with capabilities to highlight supply chain discrepancies

// Easily identify where you have capabilities within your supply chain for better production planning



Centric Integration

// Two-way integration via Centric's API

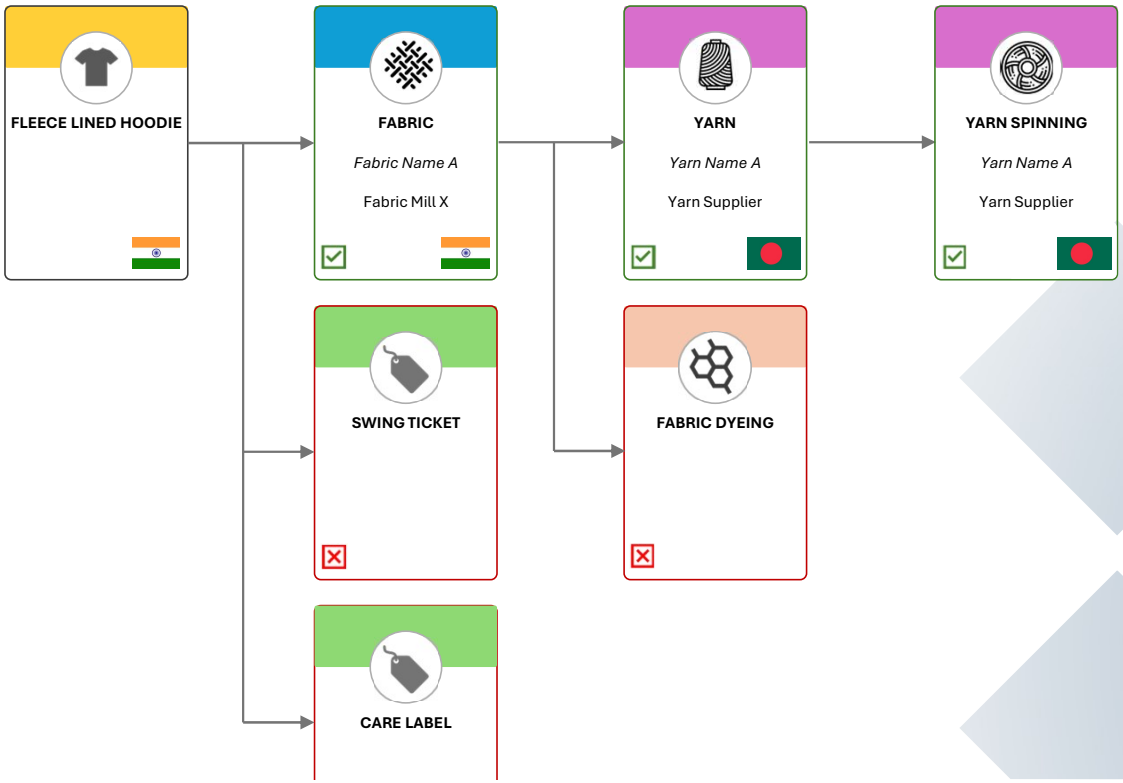
// Pull and push Material Library, Product Library and Bill Of Materials between Centric and Segura

// Laying the foundations for PLM integrations with other systems providers.

Order Flow View

// Visualise a purchase orders supply chain, declaration requirements and outstanding declarations

// Easily identify gaps in declaration

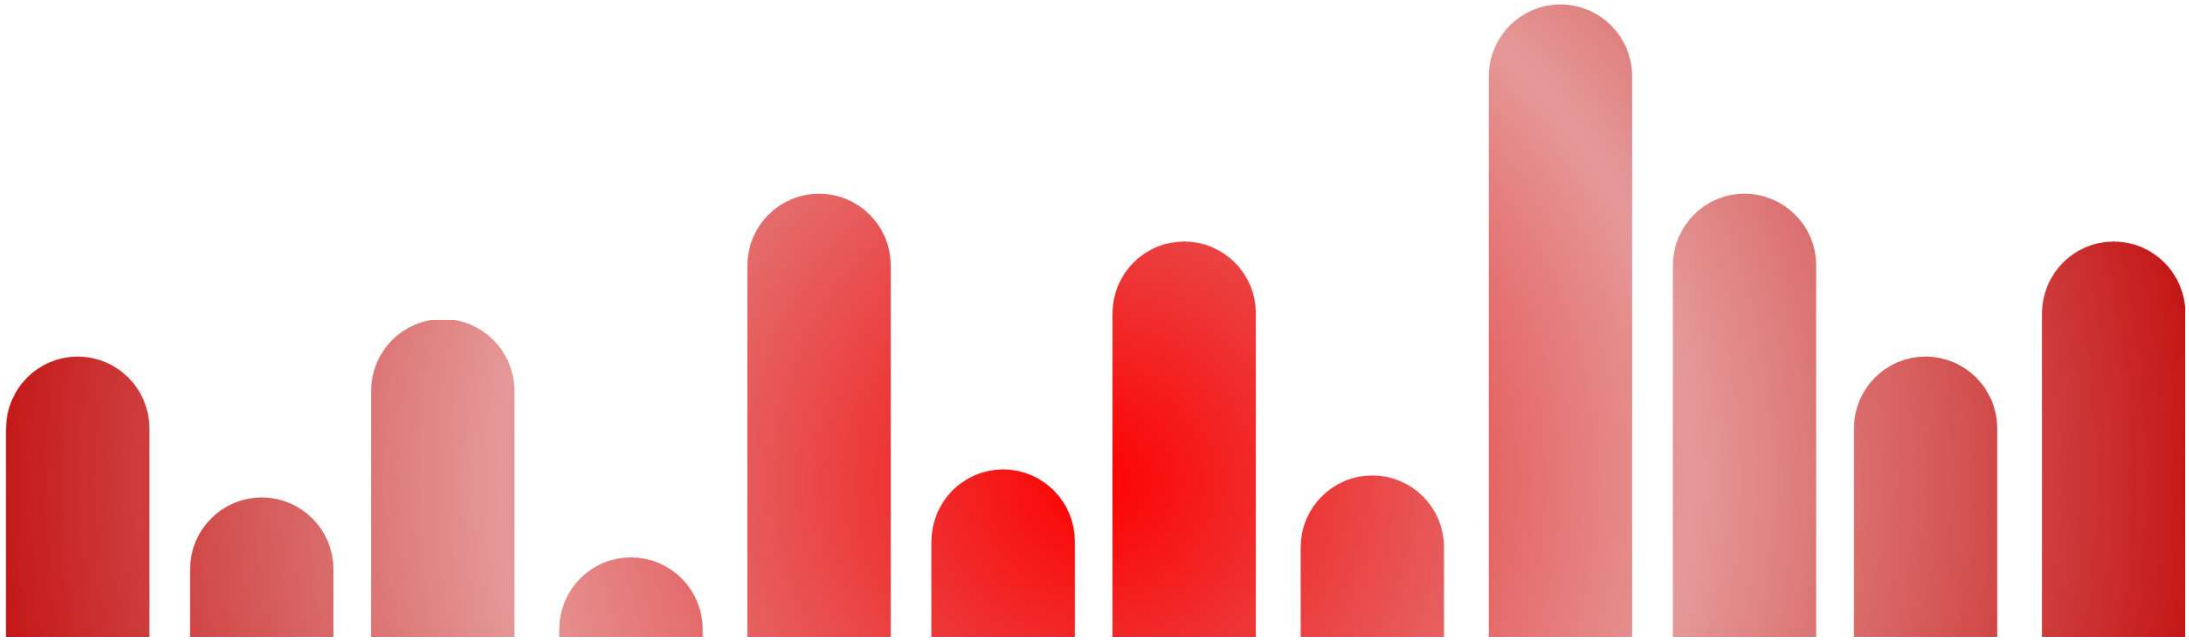


Bulk Data Management

// Streamline the process of managing data updates on mass

// Present more data in tabular layout with “excel like” updating

// Provide more opportunities to export (Excel / CSV) and import data



Ordering 2.0

// An update of the ordering process implementing all the learnings from the past 13 years of Segura

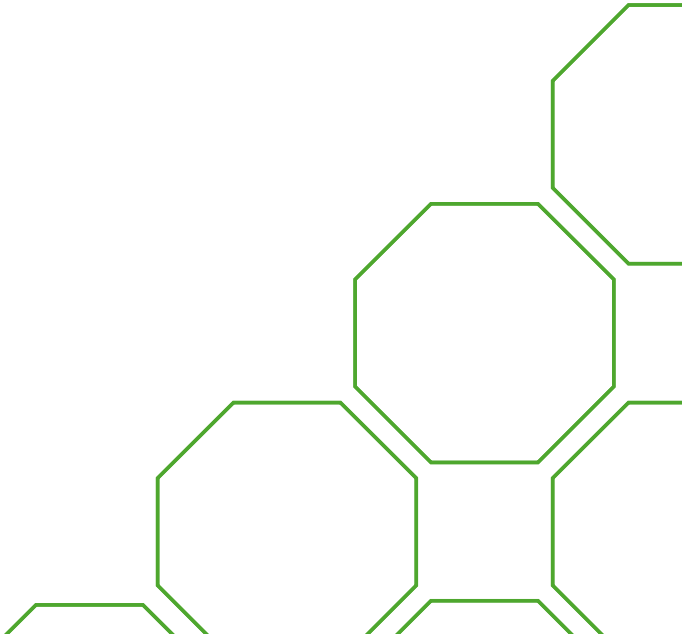
// Standardise the user experience across real time ordering and declared ordering

// Guide the user through the process to ensure that all declarations are processed

// Simplify the reordering process for repeat orders for suppliers

// Allow suppliers to see the outstanding declaration requirements

// Allow retailers to clearly see the completeness of the purchase order



THANK YOU
